

INSTRUCTIONS FOR OPERATING TYPE RW "Multi-Control" TRANSFORMER

WITH BUILT-IN WHISTLE CONTROLLER
110 Watts 115 Volts—60 Cycles

Figure 1 — Type "RW" Multi-Control Transformer

Lionel Electric Trains operate on low voltage, ranging from 8 to 18 volts, depending on the size and type of the locomotive and the number of cars used. Lionel Transformers reduce, or transform, the house voltage (usually 115 volts) to the low voltage required. The plug at the end of the transformer cord is plugged into any convenient wall outlet. The low voltage is then obtained from the output terminals at the rear of the transformer.

Type "RW" Multi-Control Transformer is made to operate on 115-volt 60-cycle alternating current, which is the normal house power supply used in the United States. The wattage rating of the "RW" Transformer is 110 watts. The wattage of a transformer is a measure of its capacity, or ability to furnish power. While your house current determines the rated voltage and frequency in cycles of the transformer, the wattage of the transformer that you need for your outfit is determined by the size of the train and the number of accessories you have in your model railroad system. The larger the train and the greater the number of accessories, the higher should be the wattage of the transformer. The Lionel catalogue states the wattage of the transformer recommended for each outfit. To assist you in further planning your railroad system, the Instruction Booklet lists the wattage required by each Lionel locomotive and accessory.
