Handbook of Computational Finance Jin-Chuan Duan,Wolfgang Karl Härdle,James E. Gentle,2011-10-25 Any financial asset that is openly traded has a market price Except for extreme market conditions market price may be more or less than a fair value Fair value is likely to be some complicated function of the current intrinsic value of tangible or intangible assets underlying the claim and our assessment of the characteristics of the underlying assets with respect to the expected rate of growth future dividends volatility and other relevant market factors Some of these factors that affect the price can be measured at the time of a transaction with reasonably high accuracy Most factors however relate to expectations about the future and to subjective issues such as current management corporate policies and market environment that could affect the future financial performance of the underlying assets Models are thus needed to describe the stochastic factors and environment and their implementations inevitably require computational finance tools **Handbook of Computational Finance** Jin-Chuan Duan,Wolfgang Karl Härdle,James E. Silvestrov,2013-11-27 The book gives a systematical presentation of stochastic approximation methods for models of American type options with general pay off functions for discrete time Markov price processes Advanced methods combining backward recurrence algorithms for computing of option rewards and general results on convergence of stochastic space skeleton and tree approximations for option rewards are applied to a variety of models of multivariate modulated Markov price processes The principal novelty of presented results is based on

consideration of multivariate modulated Markov price processes and general pay off functions which can depend not only on price but also an additional stochastic modulating index component and use of minimal conditions of smoothness for transition probabilities and pay off functions compactness conditions for log price processes and rate of growth conditions for pay off functions The book also contains an extended bibliography of works in the area This book is the first volume of the comprehensive two volumes monograph The second volume will present results on structural studies of optimal stopping domains Monte Carlo based approximation reward algorithms and convergence of American type options for autoregressive and continuous time models as well as results of the corresponding experimental studies **Handbook of Big Data Analytics** Wolfgang Karl Härdle,Henry Horng-Shing Lu,Xiaotong Shen,2018-07-20 Addressing a broad range of big data analytics in cross disciplinary applications this essential handbook focuses on the statistical prospects offered by recent developments in this field To do so it covers statistical methods for high dimensional problems algorithmic designs computation tools analysis flows and the software hardware co designs that are needed to support insightful discoveries from big data The book is primarily intended for statisticians computer experts engineers and application developers interested in using big data analytics with statistics Readers should have a solid background in statistics and computer science

Kernel-based Approximation Methods Using Matlab Gregory E Fasshauer,Michael J Mccourt,2015-07-30 In an attempt to introduce application scientists and graduate students to the exciting topic of positive definite kernels and radial basis functions this book presents modern theoretical results on kernel based approximation methods and demonstrates their implementation in various settings The authors explore the historical context of this fascinating topic and explain recent advances as strategies to address long standing problems Examples are drawn from fields as diverse as function approximation spatial statistics boundary value problems machine learning surrogate modeling and finance Researchers from those and other fields can recreate the results within using the documented MATLAB code also available through the online library This combination of a strong theoretical foundation and accessible experimentation empowers readers to use positive definite kernels on their own problems of interest *Handbook of Computational Statistics* James E. Jan W. ter Maten,2017-09-19 This book discusses the state of the art and open problems in computational finance It presents a collection of research outcomes and reviews of the work from the STRIKE project an FP7 Marie Curie Initial Training Network ITN project in which academic partners trained early stage researchers in close cooperation with a broader range of associated partners including from the private sector The aim of the project was to arrive at a deeper understanding of complex mostly nonlinear financial models and to develop effective and robust numerical schemes for solving linear and nonlinear problems arising from the mathematical theory of pricing financial derivatives and related financial products This was accomplished by means of financial modelling mathematical analysis and numerical simulations optimal control techniques and validation of models In recent years the computational complexity of mathematical models employed in financial mathematics has witnessed tremendous growth Advanced numerical techniques are now essential to the majority of present day applications in the financial industry Special attention is devoted to a uniform methodology for both testing the latest achievements and simultaneously educating young PhD students Most of the mathematical codes are linked into a novel computational finance toolbox which is provided in MATLAB and PYTHON with an open access license The book offers a valuable guide for researchers in computational finance and related areas e g energy markets with an interest in industrial mathematics **Handbook of Partial Least Squares** Vincenzo Esposito Vinzi,Wynne W. Chin,Jörg Henseler,Huiwen Wang,2010-03-10 This handbook provides a comprehensive overview of Partial Least Squares PLS methods with specific reference to their use in marketing and with a discussion of the directions of current research and perspectives It covers the broad area of PLS methods from regression to structural equation modeling applications software and interpretation of results The handbook serves both as an introduction for those without prior knowledge of PLS and as a comprehensive reference for researchers and practitioners interested in the most recent advances in PLS methodology **Partial Least Squares Structural Equation Modeling** Necmi K. Avkiran,Christian M. Ringle,2018-02-16 This book pulls together robust practices in Partial Least Squares Structural Equation Modeling PLS SEM from other disciplines and shows how they can be used in the area of Banking and Finance In terms of empirical analysis techniques Banking and Finance is a conservative discipline As such this book will raise awareness of the potential of PLS SEM for application in various contexts PLS SEM is a non parametric approach designed to maximize explained variance in latent constructs Latent constructs are directly unobservable phenomena such as customer service quality and managerial competence Explained variance refers to the extent we can predict say customer service

quality by examining other theoretically related latent constructs such as conduct of staff and communication skills Examples of latent constructs at the microeconomic level include customer service quality managerial effectiveness perception of market leadership etc macroeconomic level latent constructs would be found in contagion of systemic risk from one financial sector to another herd behavior among fund managers risk tolerance in financial markets etc Behavioral Finance is bound to provide a wealth of opportunities for applying PLS SEM The book is designed to expose robust processes in application of PLS SEM including use of various software packages and codes including R PLS SEM is already a popular tool in marketing and management information systems used to explain latent constructs Until now PLS SEM has not enjoyed a wide acceptance in Banking and Finance Based on recent research developments this book represents the first collection of PLS SEM applications in Banking and Finance This book will serve as a reference book for those researchers keen on adopting PLS SEM to explain latent constructs in Banking and Finance   *A Primer on Partial Least Squares Structural Equation Modeling (PLS-SEM)* Joe Hair (Jr),Joseph F. Hair, Jr.,G. Tomas M. Hult,Christian M. Ringle,Marko Sarstedt,2021-06-30 The Third Edition of A Primer on Partial Least Squares Structural Equation Modeling PLS SEM guides readers through learning and mastering the techniques of this approach The authors use their teaching experience to communicate the fundamentals of PLS SEM with limited emphasis on equations and and symbols relying on straightforward language instead
