Handbook Of Office Urological Procedures:

Handbook of Office Urological Procedures Hashim Hashim, Paul Abrams, Roger R Dmochowski, 2010-05-06 This handbook provides an invaluable source of information and advice on how to perform common diagnostic tests and surgical procedures. The book uniquely combines both operative day case urology and diagnostic urology into a practical and comprehensive summary of the most common day case urological procedures in a form that is concise and relevant to urological residents, consultants or nurses. This is a handy reference guide for all urologists whether in the UK, Europe or the US who find themselves doing office based urology work i.e. diagnostic work and minor surgical procedures irrespective of what training program they followed.

Office-Based Procedures, An issue of Urologic Clinics J. Stephen Jones, 2013-11-28 This issue of the Urologic Clinics covers office based procedures in urology. There are a wealth of urologic procedures that can be done in the office setting offering reduced risks to the patient, less stress and better recovery time as well as a more favourable reimbursement for the physician. Articles include more common issues such as stone management, ultrasound, prostate biopsy and vasectomy as well as infusion therapy, biofeedback and office anesthesia.

Anesthesia for Urologic Surgery Daniel M. Gainsburg, Ethan O. Bryson, Elizabeth A. M. Frost, 2013-09-10 This is a concise up to date reference on anesthesia for urological surgery. Urological anesthesia is not recognized as a specialty and a majority of anesthesiologists and nurse anesthetists will provide anesthesia for these patients. Advances in urological procedures, the advent of treatment of patients with strong anticoagulant and antiplatelet medications and the demographics of urology patients, many of whom are young or elderly, present challenges for the anesthesiologist and have necessitated changes in anesthesia practice. The last volume on this topic was published in 2000 and the time is right for a fresh presentation of contemporary expertise in anesthesia for urological surgery. The book provides a brief review of renal physiology and pharmacology then addresses anesthesia for each major group of urological procedures e.g. endoscopic, office based, laparoscopic and robotic nephrolithotripsy, renal transplantation etc and in special populations including the geriatric patient, the pediatric patient and the pregnant patient. Separate chapters discuss the unique challenges of positioning the patient and of managing the patient taking anticoagulant and antiplatelet medication and the chapter on pain management addresses common and important perioperative concerns.
