

1-DIMENSIONAL MOTION EQUATIONS

1-PACER STUDY GUIDE

VARIABLES

s is displacement

(how far an object travels from its original position)

u is initial velocity

(how fast an object is moving at the beginning)

v is final velocity

(how fast an object is moving at the end)

a is acceleration

(the rate of change of velocity—speeding up or slowing down)

t is time

(how long an object is moving)

PROBLEM SOLVING STEPS

1. Write down everything you know (all of your "known" values → displacement, initial velocity, final velocity, acceleration and time)
2. Write down everything you do not know (all of your "unknown" values → displacement, initial velocity, final velocity, acceleration and time)
3. Draw a picture if relevant
4. Pick a 1-dimensional motion equation that has 3 of your known quantities and 1 of your unknown quantities. Plug in values and solve. This process may be repeated multiple times.

$$v = at + u$$

Use me when you don't know anything about the displacement

$$s = t (v+u) / 2$$

Use me when you don't know anything about the acceleration

$$s = 1/2 at^2 + ut$$

Use me when you don't know anything about the final velocity

$$v^2 = 2as + u^2$$

Use me when you don't know anything about the time

LIMITATIONS

The limitations of the 1-dimensional motion equations are that you must be analyzing 1-dimensional motion or motion in a straight line (you can use them to analyze 2-dimensional motion but you must analyze each direction separately).

And the 1-dimensional motion equations can be used for no motion, constant velocity, or constant acceleration. The 1-dimensional motion equations cannot be used for non-constant acceleration.
