of nanotechnology referred to the particular technological goal of precisely manipulating atoms and molecules for fabrication of macroscale products also now referred to as molecular nanotechnology A more generalized description of nanotechnology was subsequently established by the National Nanotechnology Initiative which defines nanotechnology as the manipulation of matter with at least one dimension sized from 1 to 100 nanometers This definition reflects the fact that quantum mechanical effects are important at this quantum realm scale and so the definition shifted from a particular technological goal to a research category inclusive of all types of research and technologies that deal with the special properties of matter that occur below the given size threshold It is therefore common to see the plural form nanotechnologies as well as nanoscale technologies to refer to the broad range of research and applications whose common trait is size Because of the variety of potential applications including industrial and military governments have invested billions of dollars in nanotechnology research Through its National Nanotechnology Initiative the USA has invested 3.7 billion dollars The European Union has invested when 1.2 billion and Japan 750 million dollars **Handbook of Batteries and Fuel Cells** David Linden, 1984
