Algebra Rami Shakarchi, 2012-12-06 The present volume contains all the exercises and their solutions of Lang's Linear
Algebra Solving problems being an essential part of the learning process my goal is to provide those learning and teaching
linear algebra with a large number of worked out exercises Lang's textbook covers all the topics in linear algebra that are
usually taught at the undergraduate level vector spaces matrices and linear maps including eigenvectors and eigenvalues
determinants diagonalization of symmetric and hermitian maps unitary maps and matrices triangulation Jordan canonical
form and convex sets Therefore this solutions manual can be helpful to anyone learning or teaching linear algebra at the
college level As the understanding of the first chapters is essential to the comprehension of the later more involved chapters
I encourage the reader to work through all of the problems of Chapters I II III and IV Often earlier exercises are useful in
solving later problems For example Exercise 35.3 of Chapter II shows that a strictly upper triangular matrix is nilpotent and
this result is then used in Exercise 7.1 of Chapter X To make the solutions concise I have included only the necessary
arguments the reader may have to fill in the details to get complete proofs Finally I thank Serge Lang for giving me the
opportunity to work on this solutions manual and I also thank my brother Karim and Steve Miller for their helpful comments
and their support **Solutions Manual** Steven J. Leon, 1986 **Elementary Linear Algebra, Students Solutions**
