The Ray and Wave Theory of Lenses A. Walther, Adriaan Walther, 2006-11-02 Calculations on lens systems are often marred by the unjustifiable use of the small angle approximation This book describes in detail how the ray and wave pictures of lens behaviour can be combined and developed into a theory capable of dealing with the large angles encountered in real optical systems A distinct advantage of this approach is that Fourier optics appears naturally in a form valid for arbitrarily large angles The book begins with extensive reviews of geometrical optics eikonal functions and the theory of wave propagation The propagation of waves through lenses is then treated by exploiting the close connection between eikonal function theory and the stationary phase approximation Aberrations are then discussed and the book concludes with various applications in lens design and analysis including chapters on laser beam propagation and diffractive
