Introduction I want to tell you a story No not the story of how in 1991 Linus Torvalds wrote the first version of the Linux kernel You can read that story in lots of Linux books Nor am I going to tell you the story of how some years earlier Richard Stallman began the GNU Project to create a free Unix like operating system That's an important story too but most other Linux books have that one as well No I want to tell you the story of how you can take back control of your computer When I began working with computers as a college student in the late 1970s there was a revolution going on The invention of the microprocessor had made it possible for ordinary people like you and me to actually own a computer It's hard for many people today to imagine what the world was like when only big business and big government ran all the computers Let's just say you couldn't get much done Today the world is very different Computers are everywhere from tiny wristwatches to giant data centers to everything in between In addition to ubiquitous computers we also have a ubiquitous network connecting them together This has created a wondrous new age of personal empowerment and creative freedom but over the last couple of decades something else has been happening A few giant corporations have been imposing their control over most of the world's computers and deciding what you can and cannot do with them Fortunately people from all over the world are doing

something about it They are fighting to maintain control of their computers by writing their own software They are building Linux Many people speak of freedom with regard to Linux but I don't think most people know what this freedom really means Freedom is the power to decide what your computer does and the only way to have this freedom is to know what your computer is doing Freedom is a computer that is without secrets one where everything can be known if you care enough to find out Why Use The Command Line Have you ever noticed in the movies when the super hacker you know the guy who can break into the ultra secure military computer in under thirty seconds sits down at the computer he never touches a mouse It's because movie makers realize that we as human beings instinctively know the only way to really get anything done on a computer is by typing on a keyboard Most computer users today are only familiar with the graphical user interface GUI and have been taught by vendors and pundits that the command line interface CLI is a terrifying thing of the past This is unfortunate because a good command line interface is a marvelously expressive way of communicating with a computer in much the same way the written word is for human beings It's been said that graphical user interfaces make easy tasks easy while command line interfaces make difficult tasks possible and this is still very true today Since Linux is modeled after the Unix family of operating systems it shares the same rich heritage of command line tools as Unix Unix came into prominence during the early 1980s although it was first developed a decade earlier before the widespread adoption of the graphical user interface and as a result developed an extensive command line interface instead In fact one of the strongest reasons early adopters of Linux chose it over say Windows NT was the powerful command line interface which made the difficult tasks possible

Linux for Beginners Noah Herrmann, 2021-03-23 Are you looking for a comprehensive guide that will teach you how to use Linux and manage it like a pro Are you having trouble going through the Linux distributions available and deciding which one is better for your needs Do you want to take a systematic look at how far you have come with your learning If yes then keep reading Without question Linux is the most efficient operating system Yes you may believe that Windows and macOS are efficient operating systems because they dominate so much of the PC market but here are statistics that will change your mind As of 2021 Linux is used on the world's supercomputers Linux is used by 96.3 percent of the world's top 1 million servers Linux is used by the best cloud hosting services Linux is used by 23 of the top 25 websites in the world Linux is used by 90% of the world's cloud infrastructure It's challenging to assess and understand how to learn a new skill mainly when the subject appears vast There can be so much data available that it is difficult to know where to begin Even worse you start learning and soon find there are so many definitions commands and complexities not clarified This encounter is aggravating because it leaves you with even more questions unanswered Linux for Beginners requires you to be unfamiliar with the Linux experience or knowledge To get the most out of this book you need no prior information You will be led through the process in a logical and structured manner When new ideas commands or jargons are encountered they are clarified in simple terms so everyone can understand them This book is helpful even if you have never used Linux before but

want to master it add it to your skillset and maybe use it for networking programming or even basic web browsing Fortunately this book takes an easy to follow beginner friendly approach to introduce you to anything you need to know whether you are a beginner or an expert so you can apply what you have learned right away Therefore if you want to learn more about Linux but do not know where to begin click the BUY NOW button to get your hands on the best guide for mastering Linux

Linux Erickson Karnel,2022-08-25 Do you want to understand better the purpose of Linux and why do so many people prefer it over Windows If yes then keep reading Linux at the core is known as one of the best known and most utilized open source operating systems Essentially it sits underneath your other software on the computer to take these requests and relay them to the hardware on the computer Effectively all of the programs services and tools are put into this to create a super functional operating system But the thing about Linux is that it is everywhere It has been around since the 90s and it has got a super popular user base that spans all over different industries and continents So the truth is you are probably using Linux right now it s in the phones fridges and even in Roku devices and most of the internet uses this You may wonder why some people choose Linux over windows well there are a few reasons For starters Linux can be used on older computers While you can use Windows XP on some it is not supported by security updates like the later versions Many Linux distributions are reused specifically for older hardware and are updated on a regular basis Then there is also the fact that some of these distributions and environments are more familiar to those who like traditional computers than those that are using Windows 10 there are lots of complaints about Windows 10 and while the bugs may have been taken out people still prefer Linux over this This book covers Virtual Machine How secure your accounts Ubuntu Searching and Extracting Data Advanced Commands in Linux How to hack passwords Kali Linux And much more for you to learn in simple steps Click the BUY NOW button Linux is different from other types of operating systems Because it contains no proprietary software or hardware drivers This means that everything inside the Linux system is open source freely available to the public for study and modification allowing many users worldwide to modify and create their own customized versions of Linux Linux is not limited to just desktop use it also has been used in servers and industrial control applications Linux benefits the user by being open source software that anyone can modify and learn from Linux makes it easy for an average user to see how the code runs so they can see what parts are important or how things work together With Linux you can learn from the source code and just by looking at it you can figure out what is happening Now Click the BUY NOW button
