

When the transformer is connected to the power source, the current flows through the primary winding, which is connected to the power source. The secondary winding, which is connected to the track, then provides the current to the train. The transformer is designed to provide a constant current to the track, regardless of the number of trains on the track. This is achieved by the use of a special winding arrangement, which is described in the following section.

WIRING INFORMATION

The transformer is designed to be connected to the power source and the track in a specific manner. The following diagram shows the correct wiring connections for the transformer. The primary winding is connected to the power source, and the secondary winding is connected to the track. The transformer is designed to provide a constant current to the track, regardless of the number of trains on the track.
