The Biochemistry of Plants, 2012-12-02 The Biochemistry of Plants Volume 14 Carbohydrates provides information pertinent to the fundamental aspects of plant biochemistry This book deals with the function and structure of the plant cell wall by describing the physical and chemical properties of cell wall components Organized into 11 chapters this volume begins with an overview of hexose phosphate metabolism in nonphotosynthetic tissues This text then examines the findings in fructan structures conformations and linkages the enzymes involved in fructan synthesis and degradation and their cellular regulation location and metabolic role in plants Other chapters consider the methods employing enzymes to determine starch structure This book discusses as well the different biosynthetic modes of plant cell walls The final chapter deals with the various environmental factors that influence expression of the amylase gene suggesting how molecular biology may help in understanding carbohydrate biochemistry and the enzymes involved in carbohydrate synthesis and metabolism This book is a valuable resource for plant biochemists Plant Biochemistry P. M. Dey, J. B. Harborne, 1997-02-03 Plant Biochemistry provides students and researchers in plant sciences with a concise general account of plant biochemistry The edited format allows recognized experts in plant biochemistry to contribute chapters on their special topics Up to date surveys are divided into four sections the cell primary metabolism special metabolism and the plant and the environment There is a strong emphasis on plant metabolism as well as enzymological methodological molecular biological functional and regulatory aspects of plant biochemistry Illustrations of metabolic pathways are used extensively and further reading lists are also included The coverage of the subject is divided into four sections The plant cell describing both molecular components and function Primary metabolism including the pathways of carbohydrate lipid nitrogen nucleic acid and protein metabolism as well as gene regulation Special metabolism chapters on phenolics isoprenoids and secondary nitrogen compounds The plant and the environment discussions of pathology ecology and biotechnology at the molecular level The Metabolism, Structure, and Function of Plant Lipids Paul K. Stumpf, J. Brian Mudd, W. David Nes, 2012-12-06 The Seventh International Symposium on the Structure and Function of Plant Lipids took place at the University of California Davis California July 27th to August 1st 1986 This was the first time the Symposium was held in the United States The list of previous host cities reads Norwich Karlsruhe Goteborg Paris Groningen Neuchatel The addition of Davis to this distinguished list was made by the organizers with the doubts of people who give invitations to parties will anybody come In fact 155 participants registered and there were 21 spouses in attendance The scientific program was composed of nine sessions biochemistry of isoprenoids and sterols function of isoprenoids and sterols structure and function of lipids biosynthesis of complex lipids fatty acid oxygenases and desaturases medium and long chain fatty acids interaction of university government and industrial research algal lipids and genetics and biotechnology In addition to these sessions of plenary lectures there were four poster sessions in which about 140 posters were presented All of this was packed into four days and there was some comment about the scarcity of

time to ask questions of the speakers discuss the posters and even to eat lunch The compression of the program was a result of the continued desire of the organizing committees to avoid concurrent sessions The congregation of participants into a single session increases interaction and generates a feeling of unity at these symposia

Plant Lipids Denis J. Murphy, 2020-02-03 New research tools have revealed many surprising aspects of the dynamic nature of lipids and their participation in processes such as recognition intra and inter cellular signalling deterrence and defense against pathogens membrane trafficking and protein function This is in addition to new information on the more established roles of plant lipids as structural components of membranes and as long term storage products Plant lipids are also increasingly being seen as sources of a new generation of environmentally friendly biodegradable and renewable industrial products including biopolymers and high grade lubricants Plant Lipids Biology Utilisation and Manipulation provides a broad overview of plant lipid research and its many applications Linking various disciplines the editor brings together researchers from major international laboratories to review the history and current state of progress in this quickly evolving field The text starts by providing a fascinating historical perspective on the study of plant lipids from its inception as a branch of alchemy in the seventeenth century to the current post genomic era It then offers a detailed discussion on the formation modification and

utilization of fatty acids This is followed by an exploration of the major classes of macromolecular structures formed by plant lipids including bilayer membranes and storage bodies From there the contributors consider other types of macromolecular lipid assemblies in plants examining proteins and the key plant lipid structure the cuticle The final chapters look at diverse classes of plant lipids that are linked to various aspects of signaling This text provides an excellent resource for researchers and professionals in plant biochemistry molecular biology biotechnology and genetics in both the academic and industrial sectors It also meets the needs of students looking for a comprehensive introduction to this field as well as direction for fut

Ort, Charles F. Yocum, 2006-04-11 Structure and function of the components of the photosynthetic apparatus and the molecular biology of these components have become the dominant themes in advances in our understanding of the light reactions of oxygenic photosynthesis *Oxygenic Photosynthesis The Light Reactions* presents our current understanding of these reactions in thylakoid membranes Topics covered include the photosystems the cytochrome b6 f complex plastocyanin ferredoxin FNR light harvesting complexes and the coupling factor Chapters are also devoted to the structure of thylakoid membranes their lipid composition and their biogenesis Updates on the crystal structures of cytochrome f ATP synthase and photosystem I are presented and a section on molecular biology and evolution of the photosynthetic apparatus is also included The chapters in this book provide a comprehensive overview of photosynthetic reactions in eukaryotic thylakoids The book is intended for a wide audience including graduate students and researchers active in this field as well as those individuals who have interests in plant biochemistry and molecular biology or plant physiology Sulfur Metabolism in Phototrophic Organisms Rüdiger Hell, Christiane Dahl, David B. Knaff, Thomas Leustek, 2008-03-19 Sulfur is one of the most versatile elements in life due to its reactivity in different oxidation and reduction states In phototrophic organisms the redox properties of sulfur in proteins and of sulfur containing metabolites are particularly important in the interaction between the reductive assimilation processes of photosynthesis and reactive oxygen species that arise as by products of electron transport chains Thiol groups in proteins and metabolites are targets of reactive oxygen species resulting in potential damage and at the same time giving rise to redox signal cascades that trigger repair reactions and adaptation to environmental stress Further reduced sulfur compounds play a prominent role as electron donors for photosynthetic carbon dioxide fixation in anoxygenic phototrophic sulfur bacteria Interest in the investigation of the multiple functions of sulfur related processes has increased exponentially in recent years especially in molecular and cellular biology biochemistry agrobiotechnology and ecology This book provides for the first time in depth and integrated coverage of the functions of sulfur in phototrophic organisms including bacteria plants and algae it bridges gaps between biochemistry and cellular biology of sulfur in these organisms and of biology and environments dominated by them This book is designed to be a comprehensive resource on sulfur in phototrophic organisms for advanced undergraduate and graduate students beginning researchers and teachers in the area of photosynthesis bacterial energy metabolism biotechnology plant nutrition plant production and plant molecular physiology **Lipid Biochemistry** J.L. Harwood, M.I. Gurr, 2013-04-17 Lipids can usually be extracted easily from tissues by making use of their hydrophobic characteristics However such extractions yield a complex mixture of different lipid classes which have to be purified further for quantitative analysis Moreover the crude lipid extract will be contaminated by other hydrophobic molecules e g by intrinsic membrane proteins Of the various types of separation processes thin layer and column

chromatography are most useful for intact lipids High performance liquid chromatography HPLC is also rapidly becoming more popular especially for the fractionation of molecular species of a given lipid class The most powerful tool for quantitation of the majority of lipids is gas liquid chromatography GLC The method is very sensitive and if adapted with capillary columns can provide information with regard to such subtle features as the position or configuration of substitutions along acyl chains By coupling GLC or HPLC to a radioactivity detector then the techniques are also very useful for metabolic measurements Although research laboratories use generally sophisticated analytical methods such as GLC to analyse and quantify lipid samples chemical derivatizations are often used in hospitals For these methods the lipid samples are derivatized to yield a product which can be measured simply and accurately usually by colour Thus total triacylglycerol cholesterol or phospholipid phosphorus can be quantitated conveniently without bothering with the extra information of molecular species etc which might be determined by more thorough analyses

Target Sites for Herbicide Action R. Kirkwood, 2013-11-21 The development of chemicals to selectively control the growth of weeds has been a fascinating success story which has unfolded largely during the last four decades The dramatic growth of herbicide research that followed the wartime discoveries of the auxin type herbicides phenoxyalkanoic acids resulted in a whole range of compounds and mixtures which are used to eliminate broad or narrow

leaved weeds from agricultural horticultural or forestry crops Today the safe use of this armament of compounds requires our understanding of their mode of action metabolism and environmental persistence The most recently developed herbicides are highly effective inhibitors of specific enzyme systems and formulation may be an important factor determining their efficient delivery at specific target sites In this book the major target sites of herbicide action are discussed in Chapters 1-5 with particular reference to photosynthesis amino acid lipid and carotenoid synthesis and other primary target sites The effects of synergists or antagonists as modifiers of herbicide action are described in Chapter 6 The importance of efficient target site delivery as a fundamental factor in herbicide activity and selectivity is generally recognized Delivery of a potentially lethal dose of active ingredient may depend on a whole range of factors including the efficiency of application retention absorption translocation immobilization and detoxification These aspects are considered in the remaining chapters with particular reference to the pathways and mechanisms involved in the uptake translocation and metabolism of soil and foliage applied herbicides

Respiration and Crop Productivity Jeffrey S. Amthor, 2012-12-06 Respiration is a large and important component of the carbon economy of crops There are already several good books dealing with the biochemistry and physiology of plant respiration but there are none I know of that are devoted to the relationship between respiration and crop productivity although this relationship is more and more frequently being studied with both experiment and simulation Crop physiology books do cover respiration of course but the treatment is limited The purpose of the present book is to fill this void in the literature The approach taken here is to use the popular two component functional model whereby respiration is divided between growth and maintenance components After thoroughly reviewing the literature I came to the conclusion that at present this is the most useful means of considering respiration as a quantitative component of a crop's carbon economy This functional distinction is used as the framework for describing respiration and assessing its role in crop productivity Discussions and critiques of the biochemistry and physiology of respiration serve primarily as a means of more fully understanding and describing the functional approach to studying crop respiration It is assumed that the reader of this book is familiar with the fundamentals of plant physiology and biochemistry The research worker in crop physiology should find this an up to date summary of crop respiration and the functional model of respiration This book is not however a simple review of existing data

Lipid Metabolism in Plants Thomas S.
