manufacturing engineering *Intelligent Systems in Production Engineering and Maintenance* Anna Burduk, Edward Chlebus, Tomasz Nowakowski, Agnieszka Tubis, 2018-07-31 The book presents a collection of 103 peer reviewed articles from the Second International Conference on Intelligent Systems in Production Engineering and Maintenance ISPEM 2018 The conference was organized by the Faculty of Mechanical Engineering and CAMT Centre for Advanced Manufacturing Technologies Wroc aw University of Science and Technology and was held in Wroc aw Poland on 17 18 September 2018 The conferences topics included the possibility of using a wide range of intelligent methods in production engineering presenting and discussing new solutions for innovative plants research findings and case studies demonstrating advances in production and maintenance from the point of view of Industry 4 0 particularly applications of intelligent systems methods and tools in production engineering maintenance logistics quality management information systems and product development The book is divided into two parts the first includes papers related to intelligent systems in production engineering while the second is dedicated to special sessions focusing on 1 Computer Aided methods in Production Engineering 2 Mining 4 0 and Intelligent Mining Transportation 3 Modelling and Simulation of Production Processes 4 Multi Faceted Modelling of Networks and Processes 5 Product Design and Product Manufacturing in Industry 4 0 This book is an excellent source of information for scientists in the field of manufacturing engineering and for top managers in production enterprises *Quantitative Approaches in Logistics and Supply Chain Management* Hans-Jürgen Sebastian, Phil Kaminsky, Thomas Müller, 2014-11-27 This contributed volume presents selected research papers from the 8th workshop on Logistics and Supply Chain Management which was held in October 2013 in Berkeley California It focuses on the topical issue of quantitative approaches in logistics and supply chain management mainly covering facility location and location routing vehicle routing and scheduling courier express and parcel service network design healthcare logistics as well as logistics risk management The target audience primarily comprises research experts and practitioners in the field but the book will also be beneficial to graduate students **Inventory Planning for Remanufacturing** Kevin James Gaudette, 2003 Remanufacturing is a process by which a used product called a core is restored to like new condition The process involves disassembling the core down to its constituent used parts differentiating between serviceable parts and scrap and using a combination of serviceable parts and new parts to rebuild the product A critical component of the process from an operational standpoint is the planning of core purchases disassemblies and new part purchases These three unique inventory planning decisions have been scarcely addressed in the literature to date This research presents and tests two alternative techniques for solving the remanufacturing inventory planning problem The first is a deterministic network linear programming formulation with safety stock ReNet while the second is a stochastic formulation that explicitly accounts for uncertain yields SIPR The experiment is designed to test the relative performance of the two techniques and the effects of yield uncertainty and product characteristics on the solution cost The results indicate that SIPR outperforms ReNet particularly for higher levels of

uncertainty Further product characteristics were shown to have a significant effect on both the relative performance and the solution cost In particular the expected yields of the highest cost parts tend to drive the solution Remanufacturing managers should therefore focus their resources on increasing the yields of high cost parts through design and quality control initiatives Since reducing yield uncertainty also significantly reduces cost managers should further consider implementing procedures or investing capital to more accurately forecast yields

The Maintenance Management Framework Adolfo Crespo Márquez, 2007-06-10 The Maintenance Management Framework describes and reviews the concept process and framework of modern maintenance management of complex systems concentrating specifically on modern modelling tools deterministic and empirical for maintenance planning and scheduling It presents a new perspective of maintenance management by focusing on the course of maintenance actions presenting a structure that ensures proper support for current maintenance managers clarifying the functionality that is required from information technology when applied to maintenance and the functions of modern maintenance engineering and creating a set of practical models for maintenance management planning and scheduling The discussion of all of these issues is supported through the use of case studies The Maintenance Management Framework will be beneficial for engineers and professionals involved in maintenance management maintenance engineering operations management quality etc It will also be of interest to graduate students and researchers in this field

Swamidass, 2006-09-21 The Encyclopedia of Production and Manufacturing Management is an encyclopedia that has been developed to serve this field as the fundamental reference work Over the past twenty years the field of production and operations management has grown more rapidly than ever and consequently its boundaries have been stretched in all directions For example in the last two decades production and manufacturing management absorbed in rapid succession several new production management concepts manufacturing strategy focused factory just in time manufacturing concurrent engineering total quality management supply chain management flexible manufacturing systems lean production and mass customization to name a few This explosive growth makes the need for this volume abundantly clear The manufacturing industry thinks and acts more broadly than it did several decades ago The most notable change has been the need for manufacturing managers to think in technological strategic and competitive terms This is a very favorable development and it leads to manufacturing success The entries in this encyclopedia include the most recent technical and strategic innovations in production and manufacturing management The encyclopedia consists of articles of varying lengths The longer articles on important concepts and practices range from five to fifteen pages There are about 100 such articles written by nearly 100 authors from around the world In addition there are over 1000 shorter entries on concepts practices and principles The range of topics and depth of coverage is intended to suit both student and professional audiences The shorter entries provide digests of unfamiliar and complicated subjects Difficult subjects are made intelligible to the reader without oversimplification The strategic and technological perspectives on various topics give this Encyclopedia its distinctiveness and uniqueness The world of manufacturing today is increasingly competitive It is apparent that manufacturers must respond to these competitive pressures with technical and strategic innovation This encyclopedia has been developed to help researchers students and those in the manufacturing industry to understand and implement these ongoing changes in the field Evolution of Supply Chain Management Yoon Seok Chang, Harris C. Makatsoris, Howard D. Richards, 2007-05-08 In the last half of the twentieth century industry encountered a revolutionary change brought about by the harnessed power of seemingly ever increasing capacity speed and functionality of computers and microprocessors This strength provided management and workers within industries with new capabilities for management planning and control design quality assurance and customer support Organized information flow became the mainstay of industrial companies New tools and information technology systems emerged and evolved to enable companies to integrate the various departments Design Procurement Manufacturing Sales and Finance within companies particularly the larger ones including international corporations This was to give them a chance to meet new demands for product time to market just in time supply of orders and customer support To the smaller company these changes were not so apparent Neither the tools nor systems nor indeed their economic value seemed appropriate to them except for special cases While all this was happening

the structure of the larger companies began to disintegrate Strong competitive pressures and globalization of the market place brought this about Shedding unwanted competence and subcontracting it to others became common practice Regional market pressures triggered companies to reorganize to create produce and distribute goods and services Greater dependency on chains of supply from external companies became the norm Medium and smaller sized companies began to gain some advantage and at the same time some were sucked into management and control systems governed by the larger companies
