Maize. Cultivation and Fertilization K. Schrimpf, 1966 Significance and distribution Origin and history Botany Conditions of cultivation Farm management Breeding Cultivation Fertilization Irrigation Maintenance Diseases and pests Harvesting Processing and storage Yields Uses Trade and production statistics Corn Crop Production Arn T. Danforth, 2009 Corn or maize is a crop that originated in Mexico and has spread all over the world as a major food crop Sustainable production of a corn field crop as grain corn for feed food and biofuels as well as sweet corn for fresh market or processing and as silage for high energy sources requires scientific management of nutrients along with several other crop management practices such as proper plant population density timely seeding and harvesting soil water weeds and pests control Corn has become the major item in the diet of many tropical peoples the main grain used for animal feed in temperate regions as well as new stocks for many other purposes including recently used as feedstock for biofuels Rapid expansion of grain based ethanol production in North America has already caused concern about future food and feed supplies This important book gathers the latest research from around the world in this dynamic field Maize. Cultivation and fertilization. By K. Schrimpf K. Schrimpf, 1966 Alleviating Soil Fertility Constraints to Increased Crop Production in West Africa A. Uzo Mokwunye, 2012-12-06 Tropical Africa escaped from the glaciers that covered the temperate parts of the world during the Ice Age The legacy is that most of the parent materials of the soils of tropical Africa are old highly weathered and devoid of bases and phosphate bearing minerals Traditional farming systems which were relatively stable and sustainable relied on long fallow periods after one to two years of cropping to maintain the productive capacity of the soils In recent times and especially in densely populated areas a sizeable class of landless farmers have begun to cultivate marginal lands or to invade the forest reserves thereby exacerbating the problems of land and environmental degradation of soil fertility that will facilitate the production of adequate quantities of the principle Maintaining a level staples has become a major challenge to agricultural scientists in tropical Africa To increase the nutrient supplying power of soils requires the inputs of fertilizers These can be organic or inorganic The efficiency with which these externally supplied inputs can increase agricultural production and reduce soil and environmental deterioration is dependent on the ability of scientists to determine the right types and quantities of the products to apply to each soil crop and cropping system as well as the ability of farmers to acquire requisite farm management skills **Fertilizer subsidies in Malawi: From past to present** Benson, Todd, De Weerd, Joachim, Duchoslav, Jan, Masanjala, Winford, 2024-02-12 Malawi has been at the center of the debate on agricultural input subsidies in Africa ever since it significantly expanded its fertilizer subsidy program about two decades ago When it did so Malawi was a trailblazer receiving international attention for seemingly leveraging the subsidy program to move the country from a situation characterized by food deficits and widespread hunger to crop production surpluses In this paper we trace the history of Malawi's subsidy program over the past 70 years describing how the country arrived at that watershed

moment earlier this century and how the subsidy program has developed since We show how donor support for the program has wavered and how external pressure to remove the subsidy has repeatedly been unsuccessful We also demonstrate how over the years the program s total fiscal burden has fluctuated significantly However we find that since the expansion of the subsidy program in 2004 the fiscal costs of the program have shown little correlation with the maize harvest that same agricultural season We show that the subsidy program has succeeded in raising awareness about the value of the fertilizer for increased crop productivity However despite its continued prominence in the country s agricultural policy most Malawian smallholder do not manage to grow sufficient maize to feed their households throughout the year and every year millions depend on food assistance during the worst months of the lean season Fertilizer Application on Crop Yield Jagadish Timsina,2019-04-02 Fertilizer application can increase crop yields and improve global food security and thus has the potential to eliminate hunger and poverty However excessive amounts of fertilizer application can contribute to groundwater pollution greenhouse gas emissions eutrophication deposition and disruptions to natural ecosystems and soil acidification over time Small farmers in many countries think inorganic fertilizers are expensive and degrade soils and thus policymakers want to promote organic instead of inorganic fertilizers To develop practical fertilizer recommendations for farmers yield responses to applied fertilizers from inorganic and organic sources indigenous nutrient supply from soil and nutrient use efficiency require consideration There is a lack of sufficient scientific understanding regarding the need and benefit of integrated nutrient management i e judicious use of inorganic and organic sources of nutrients to meet the nutrient demand of high yielding crops increase yields and profits and reduce soil and environmental degradation Inadequate knowledge has constrained efforts to develop precision nutrient management recommendations that aim to rationalize input costs increase yields and profits and reduce environmental externalities This Special Issue of the journal provided some evidence of the usefulness of integrated nutrient management to sustain soil resources and supply nutrients to crops grown with major cereal and legume crops in some developing countries Improving the Profitability, Sustainability and Efficiency of Nutrients Through Site Specific Fertilizer Recommendations in West Africa Agro-Ecosystems Andre Bationo,Djimashé Ngaradoum,Sansan Youl,Francois Lompo,Joseph Opoku Fening,2018-04-03 As part of its efforts to improve fertilizer use and efficiency in West Africa and following the recent adoption of the West African fertilizer recommendation action plan RAP by ECOWAS this volume focuses on IFDC s technical lead with key partner institutions and experts to build on previous and current fertilizer recommendations for various crops and countries in West Africa for wider uptake by public policy makers and fertilizer industry actors *Annual Report* International Fertilizer Development Center,1990 Nitrogen Use Efficiency and Sustainable Nitrogen Management in Crop Plants Nandula Raghuram,Susanne Schmidt,Tariq Aziz,Surya Kant,Jianbin Zhou,2022-04-26 **Grain Legumes and Green Manures for Soil Fertility in Southern Africa** Stephen R. science soil management rhizosphere ecology crop root soil interactions and management environmental microbial technology recombinant microorganisms techniques PGPR etc Innovative management strategies have been used to clarify the matching mechanisms underlying crop soil fertilizer systems in order to achieve the triple H namely high yield high quality and high nutrient efficiency
