Making Choices In Health Who Guide To Cost Effectiveness Analysis:

Making Choices in Health T. Tan-Torres Edejer, 2003 *Making Choices in Health* World Health Organization, 2003

The Guide in Part I begins with a brief description of generalized CEA and how it relates to the two questions raised above. It then considers issues relating to study design, estimating costs, assessing health effects, discounting, uncertainty, and sensitivity analysis, and reporting results. Detailed discussions of selected technical issues and applications are provided in a series of background papers originally published in journals but included in this book for easy reference. In Part II, from the back cover: *Making Choices in Health: WHO Guide to Cost-effectiveness Analysis* Rob M. Adam, Baltussen (Taghreed),

Several guidelines on cost effectiveness analysis CEA already exist. There are two reasons for producing another set. The first is that traditional or incremental CEA ignores the question of whether the current mix of interventions represents an efficient use of resources. Secondly, the resources required to evaluate the large number of interventions required to use CEA to identify opportunities to enhance efficiency are prohibitive. The approach of Generalized CEA proposed in this Guide seeks to provide analysts with a method of assessing whether the current as well as proposed mix of i

Evidence-based Decisions and Economics Ian Shemilt, Miranda Mugford, Luke Vale, Kevin Marsh, Cam Donaldson, 2011-09-22. The need for evidence-based decisions that take account of both effectiveness and economics is greater now than ever. Using case studies and illustrative examples throughout, the authors describe how the activities and outputs of evidence synthesis, systematic review, economic analysis, and decision making interact within and across different spheres of health and social policy and practice. Expanding on the first edition, the book now covers approaches to evidence

synthesis that combine economics and systematic review methods in the applied fields of social welfare education and criminal justice as well as health care. Ethics and Governance of Biomedical Research Daniel Strech, Marcel Mertz, 2016-05-09 In this book scholars with different disciplinary and national backgrounds argue for possible answers and analyse case studies on current issues of governance in biomedical research. These issues comprise among others the research care distinction, risk evaluation in early human trials, handling of incidental findings, nocebo effects, cluster randomized trials, publication bias or consent in biobank research. This book demonstrates how new technologies and research possibilities multiply or intensify already known governance challenges leaving room for ethical analysis and complex moral choices. Clinical researchers, research ethics committee members and research ethicists have all to deal with such challenges on a daily basis. While general reflection on core concepts of research ethics is seldom pointless, those confronted with hard moral choices do need more practical and contextualized reflection on the said issues. This book particularly provides such contextualized reflections and aims to inform all those who study, conduct, regulate, fund or participate in biomedical research.

Tediosi, 2011-12-05T00:00:00+01:00 Malaria is one of the major public health problems for low income countries a major global health priority and it has also a dramatic economic impact Standard tools traditionally used to assess the public health and economic impact of malaria control interventions such as efficacy trials and static cost effectiveness analyses capture only short term effects They fail to take into account long term and dynamic effects due to the complex dynamic of malaria and to the interactions between intervention effectiveness and health systems This study aimed at developing integrated mathematical models for predicting the epidemiologic and economic effects of malaria control interventions The study combines innovative mathematical models of malaria epidemiology with innovative modeling of the health system and of the costs and effects of malaria control interventions These approaches are applied to simulate the epidemiological impact and the cost effectiveness of hypothetical malaria vaccines Combining advanced stochastic simulation modeling of malaria epidemiology with health system dynamic modeling is a crucial innovation proposed by the approaches presented in this thesis

Global Bioethics Ronald M. Green, Aine Donovan, Steven A. Jauss, 2008-11-06 Medical care and biomedical research are rapidly becoming global Ethical questions that once arose only in the narrow context of the physician patient relationship in relatively prosperous societies are now being raised across societies cultures and continents For example what should be the standard of care for clinical trials of medical innovations in poorer countries Are researchers obligated to compare new therapies or drugs with the best known ones available or can they use as a benchmark the actual treatments or lack of treatments available to poor people Should pharmaceutical companies seeking to lower the costs of new drug trials be allowed to enrol citizens of less developed countries in them even when those individuals cannot afford and will not be eligible for the resulting drugs More generally should the norms of medicine and research be the same across cultures or can they adapt to local social economic or religious conditions *Global Bioethics* gathers some of the world's leading bioethicists to explore many of the new questions raised by the globalization of medical care and biomedical research Among the topics

covered are the impact of globalization on the norms of medical ethics the conduct of international research the ethics of international collaborations challenges to medical professionalism in the international setting and the relation of religion to global bioethics
