variety of different fields **Overcoming Fragmentation in Southeast Europe** Panayiotis Getimis, 2017-11-28 With the expansion of the European Union the countries of Southeast Europe have finally been brought together within one socio political entity The restructuring of these economies following globalization and neoliberalization has meant that this region has become much more open to geopolitical shifts and trends While the various countries have all entered into the slow process of European integration the historic fragmentation of this region has led to various conflicts and contradictions in the restructuring and transition of national economies This volume provides a theoretical and comparative overview which examines the prospects for spatial cohesion in this region With the need to handle persisting problems and conflicts from the past while coping with new economic and political structures Southeast Europe proves to be a challenging yet fruitful testing ground for how best to overcome fragmentation and establish a long term process of social and economic integration

Planning Cultures in Europe Frank Othengrafen, 2016-12-05 Bringing together an interdisciplinary team from across the EU this book connects elements of cultural and planning theories to explain differences and peculiarities among EU member states A culturized planning model is introduced to consider the rules of the game how culture affects planning practices not only on an explicit surface but also on a hidden implicit level The model consists of three analytical dimensions planning artifacts planning environment and societal environment This book adopts these dimensions to compare planning cultures of different European countries This sheds light not only on the organizational or institutional structure of planning but also the influence of deeper cultural values and layers on planning and implementation processes *Europe's Changing Geography* Nicola Bellini, Ulrich Hilpert, 2013-08-21 European macro regions Euroregions and other forms of inter regional cross border cooperation have helped to shape new scenarios and new relational spaces which may generate opportunities for economic development while redefining the political and economic meaning of national borders This book is based on a number of key case studies which are crucial to understanding the complex web of political economic and cultural factors that shape the heterogeneous picture of Europe's new geography This book provides a fresh view on this phenomenon with a realistic approach shedding light on its complexity as well as on its ambiguities The new macro regions are interpreted with an approach recognizing the importance of institutionalization but also their flexible configuration and blurred borders The book also raises the issue of credibility and legitimacy arguing that inter regional cooperation has to be removed from the foggy realm of the exchanges between local political and bureaucratic elites in order to be clearly and concretely motivated and functional to key strategic objectives of the regions Finally the authors suggest a complementarity between relations based on proximity and wider possibly global networks where some territories and especially metropolises find opportunities based on virtual proximity *Europe's Changing Geography* provides a substantial re appraisal of a key phenomenon in the process of European integration today It will be of interest both to scholars of the political economy of European regionalism and to practitioners **Mobilising Place Management** Claus Lassen, Lea Holst Laursen, 2020-11-12 Mobilising Place

Management makes an important contribution to the mobilities field by arguing for the need to rethink place management. It takes a point of departure in the mobilities turn and relational place thinking while exploring the relationship between place and mobility. In a world of increasing mobility and global competition between nations, cities and urban regions, the managing of places seems more relevant than ever before. By examining various examples of place and mobilities that range from the airport, rural village, tourist site, port, city to the city region, this book argues that the management of places can be informed and enhanced by installing a greater awareness and understanding of mobility. This insight could potentially improve the ability of current place management to translate a relational and mobilities orientated thinking into concrete actions, instructions, interventions, designs, plans, policies and management control systems. The book will be essential reading for researchers, practitioners and students in the field of place management and across urban studies, planning, design, geography, sociology, tourism, transport and history.

Beyond Territoriality Gunther Handl, Joachim Zekoll, Peer

Zumbansen, 2012-10-23 Taking extraterritoriality the traditional touchstone for the state centered allocation of transnational legal authority as its conceptual starting point, the book traces the evolution of transnational legal authority in the course of globalization. It examines various representative transnational legal scenarios covering issues of inter alia the environment, foreign trade and investment, corporate governance, criminal justice, cyberspace and arms control. The end result is a complex yet nuanced picture of today's global governance architecture in which transnational legal authority may be exercised unilaterally or multilaterally, be minimally coordinated internationally or formally institutionalized, reflect a traditional state centered a supra national or privatized approach and be rooted in a single or a multiple layered normative system.

The

Routledge Handbook of Regional Design Michael Neuman, Wil Zonneveld, 2021-04-15 The Routledge Handbook of Regional Design explores contemporary research, policy and practice that highlight critical aspects of strategy making, planning and designing for contemporary regions including city regions, bioregions, delta regions and their hybrids. As accelerating urbanization and globalization combine with other forces such as the demand for increasing returns on investment, capital migration and innovation, they yield cities that are expanding over ever larger territories. Moreover, these polycentric city regions themselves are agglomerating with one another to create new territorial mega regions. The processes that beget these novel regional forms produce numerous and significant effects, positive and negative, that call for new modes of design and management so that the urban places and the lives and well being of their inhabitants and businesses thrive sustainably into the future. With international case studies from leading scholars and practitioners, this book is an important resource not just for students, researchers and practitioners of urban planning but also policy makers, developers, architects, engineers and anyone interested in the broader issues of urbanism.

Staging the New Berlin Claire Colomb, 2013-06-17

This book explores the politics of place marketing and the process of urban reinvention in Berlin between 1989 and 2011. In the context of the dramatic socio economic restructuring processes, changes in urban governance and physical

transformation of the city following the Fall of the Wall the new Berlin was not only being built physically but staged for visitors and Berliners and marketed to the world through events and image campaigns which featured the iconic architecture of large scale urban redevelopment sites Public private partnerships were set up specifically to market the new Berlin to potential investors tourists Germans and the Berliners themselves The book analyzes the images of the city and the narrative of urban change which were produced over two decades In the 1990s three key sites were turned into icons of the new Berlin the new Postdamer Platz the new government quarter and the redeveloped historical core of the Friedrichstadt Eventually the entire inner city was staged through a series of events which turned construction sites into tourist attractions New sites and spaces gradually became part of the 2000s place marketing imagery and narrative as urban leaders sought to promote the creative city By combining urban political economy and cultural approaches from the disciplines of urban politics geography sociology and planning the book contributes to a better understanding of the interplay between the symbolic politics of representation through place marketing and the politics of urban development and place making in contemporary urban governance

Cosmopolitan Spaces Chris Rumford, 2008-06-30 The book advances a provocative critical reading of both globalization theory and contemporary Europe Concerned with questions of space borders and governance Cosmopolitan Spaces challenges conventional notions of cosmopolitanism and its relevance to conceptualizations of space and offers a fresh take on the meaning and implications of globalization

'Whither regional studies?' Andy Pike, 2013-09-13 Regional studies are at a vibrant conjuncture Regions continue to provide a conceptual and analytical focus for often overlapping concerns with economic social political cultural and ecological change In the context of increased interest in inter and multi disciplinary approaches regions remain an arena in which synthesis across disciplines economics geography planning politics and sociology can take place Yet recent work has raised fundamental questions about how we think about and research regions and regional change development governance and regulation First emergent conceptual ideas have introduced new thinking about space place and scale that interprets regions as unbounded relational spaces This work has disturbed notions of regions as bounded territories and questioned hierarchical systems of scale through more complex multi scalar approaches Second research methodology has grown in sophistication and sensitivity but remains somewhat polarised between the binaries of positivist often quantitative and more theoretically diverse typically qualitative approaches Last regional governance policy and politics are wrestling with the conceptual methodological and political complexities of new modes and geographies of governance and emergent multi agent and multi level institutional architectures This book brings together important voices in regional studies to contribute to and reflect upon these current issues and debates While we are at an early stage in beginning to think through what such conceptual theoretical methodological governance policy and political innovations and developments mean for regional studies the magnitude and resonance of such issues underpin the vitality of research on the region This book was published as a special issue of Regional Studies

A Planner's Encounter with Complexity

Elisabete A. Silva, 2016-03-16 Spatial planning is about dealing with our everyday environment In *A Planner's Encounter with Complexity* we present various understandings of complexity and how the environment is considered accordingly One of these considerations is the environment as subject to processes of continuous change being either progressive or destructive evolving non linearly and alternating between stable and dynamic periods If the environment that is subject to change is adaptive self organizing robust and flexible in relation to this change a process of evolution and co evolution can be expected This understanding of an evolving environment is not mainstream to every planner However in *A Planner's Encounter with Complexity* we argue that environments confronted with discontinuous non linear evolving processes might be more real than the idea that an environment is simply a planner's creation Above all we argue that recognizing the complexity of our environment offers an entirely new perspective on our world and our environment on planning theory and practice and on the raison d'être of the planners that we are *A Planner's Encounter with Complexity* is organized into 17 chapters It begins with the interplay of planning and complexity from the perspective of contemporary planning theory It continues by critically assessing planning theory and practice in the light of the interdisciplinary debate regarding complexity thinking As the book progresses it positions itself ever closer to the perspective of complexity thinking looking at the planning discipline from the outside in clarifying the facets of complexity and its importance in planning Finally conceptual and theoretical developments towards more applied examples are identified in order to see the interplay of planning and complexity in practice This book emphasizes the importance of complexity in planning clarifies many of the concepts and theories presents examples on planning and complexity and proposes new ideas and methods for planning
