**Urban Food Production for Ecosocialism** Salvatore Engel-Di Mauro, George Martin, 2021-09-05 This book explores the critical role of urban food production in strengthening communities and in building ecosocialism It integrates theory and practice drawing on several local case studies from seven countries across four continents China Cuba Ghana Italy Tanzania the UK and the US Research shows that the term urban agriculture overstates the limited food growing potential in cities due to a shortage of land required for growing grains the basic human food staple For this reason the book suggests urban cultivation as an appropriate term which indicates social and political progress achieved through combined labours of urbanites to produce food It examines how these collaborative food growing efforts help raise local social capital foster community organisation and create ecological awareness in order to promote urban food production while also ensuring environmental sustainability This book illustrates how urban cultivation constitutes a potentially important aspect of urban ecosystems as well as offers solutions to current environmental problems It recentres attention to the global South and debunks Eurocentric narratives challenging capitalist commercial food growing regimes and encouraging ecosocialist food growing practices Written in an accessible style this book is recommended reading about an emergent issue which will interest students and scholars of environmental studies geography sociology urban studies politics and economics

**Multimedia Environmental Models J.** Mark Parnis,Donald Mackay,2020-09-07 Multimedia Environmental Models The Fugacity Approach Third Edition takes a broad approach of viewing chemical behavior in the total biosphere of connected biotic and abiotic compartments Chemicals are subject to the laws of mass balance a constraint that provides the opportunity to establish quantitative expressions for chemical fate that are central to chemical management and regulatory legislation This book employs both the conventional concentration based procedures and those based on application of the more elegant and powerful concept of fugacity to characterize equilibrium steady state distribution and time dependent transport between environmental phases such as air water and soil Organic chemicals are emphasized because they are more easily generalized when assessing environmental behavior Features Illustrates professional approaches to calculating the fate of chemicals in the environment Explicitly details all worked examples in an annotated step by step fashion Presents real life freely downloadable models of use to government industry and private consulting professionals and students alike Clarifies symbols and notation

Pesticides, Organic Contaminants, and Pathogens in Air James N. Seiber,Thomas M. Cahill,2021-10-07 The air is an important but largely unrecognized source of contaminant fate in the environment including transport of pesticides and contaminants to nontarget areas and exposures for people and wildlife This book summarizes and places in perspective the potential transport transformation and health implications of pesticides and contaminants in air including the air we breathe It delves into the hypothesis that the atmosphere is the most significant environmental compartment affecting the overall transport

and fate of many classes of environmental contaminants The authors draw parallels between sampling analysis and impact of airborne toxics and particulate matter with the COVID 19 pandemic Airborne viruses and fine particulate matter which are of similar size have remarkable parallels in how they are transmitted and accumulated in the respiratory tract FEATURES Assesses exposures of people and wildlife to airborne chemicals Includes case study applications with relevant data summarized for pesticides and contaminants in air Discusses approaches to modeling pesticides and contaminants dispersion and fate in air Includes an assessment of the physicochemical properties of pesticides and contaminants that influence sampling and atmospheric mobility and fate The authors are global experts in air contaminant research and this book is well organized and helpful for people interested in regulatory health and other topics related to pesticides and contaminants in air James N Seiber is a Professor Emeritus at the University of California Davis Thomas M Cahill is an Associate Professor in the School of Mathematical and Natural Sciences at Arizona State University
