Raizada, 2012-12-06 This volume addresses a fundamental puzzle in biology and medicine namely how does tissue develop repair and replace itself The answer appears to lie in growth factors and their regulation To thrive and survive we need growth factors and this book concentrates on two factors that are related to growth hormone Growth hormone does not act directly on all tissues but mediates many of its actions through the release of insulin like growth factors from the liver The growth factors were originally called somatomedins by McConaghey and Sledge 1 who discovered that they mediated growth like effects of growth hormone However the factors were purified on the basis of their insulinomimetic actions on fat and muscle and it is their relationship to the insulin family of peptides that now gives them their name 2 3 of insulin like growth factors IGFs They mediate the actions of growth hormone on the proteoglycan synthesis of cartilage and produce mitogenic effects in fibroblast cultures Handbook of Growth Factors (1994) Enrique Pimentel, 2017-09-26 Volume I of this book provides a comprehensive discussion of the factors involved in regulation of the cell cycle the general biological properties of growth factors and the receptor and postreceptor mechanisms of action of these signaling agents It evaluates the possible role of growth factors in the regulation of proto oncogene and tumor suppressor gene expression and the development of neoplastic processes is discussed in detail Neuronal Growth Factors Mark Bothwell, 2013-06-29 A host of environmental factors regulate the embryonic development of neurons In adults the survival of neurons the regeneration of damaged axons and plastic changes in axonal arborization are also controlled by a complex array of environmental cues An important category of regulatory influences involves target derived hormone like peptides acting on neuronal cell surface receptors Nerve growth factor NGF was the first such factor to be characterized LEVI MONTALCINI and HAMBURGER 1953 and has served as the model against which all similar factors are compared A number of factors with properties similar to NGF have been described with activities toward differing populations of neurons Many of these factors have been characterized only poorly at the biochemical level However several factors have been characterized to the extent that molecular clones are available and complete amino acid sequences are known These include three structurally related factors NGF itself SCOTT et al 1983 brain derived neurotrophic factor BDNF LEIBROCK et al 1989 and neurotrophin 3 NT 3 MAISONPIERRE et al 1990 HOHN et al 1990 ciliary neurotrophic factor CNTF LIN et al 1989 and a second set of structural homologs acidic and basic fibroblast growth factors aFGF bFGF ABRAHAM et al 1986 JAYE et al 1986 Investigators have cloned the receptors for NGF JOHNSON et al 1986 RADEKE et al 1987 and FGF LEE et al 1989

Transforming Growth Factor β in Cancer Therapy Volume I Basic and Clinical Biology The present volume brings together a wealth of information that is fundamental to understanding the role of TGF in the pathogenesis prevention and treatment of cancer It is not even 25 years since TGF was first isolated and characterized as a dimeric peptide from both human and bovine sources ^{1 3} but the entire field of TGF research has grown and expanded so that it is now a central theme in all of cell biology There is almost no tissue or organ in the mammalian body in which TGF does not play a central role in embryonic differentiation or in adult function and furthermore malfunction of the normal physiology of TGF can have disastrous consequences in almost all of these sites Therefore the present comprehensive review of so many aspects of TGF function is a most welcome attempt to bring together a huge body of experimental data that is of the utmost importance in the field of oncology **Transforming Growth Factor-Beta in Cancer Therapy, Volume II** Sonia B. Jakowlew, 2010-01-01

Transforming Growth Factor β in Cancer Therapy Volume II Cancer Treatment and Therapy The chapters in this volume confer an abundance of knowledge about the current state of our understanding of transforming growth factor β TGF β in cancer treatment and therapy Unlike several more traditional positive polypeptide growth factors that stimulate cellular proliferation the prototypical TGF β is now known to inhibit the growth of most normal cell types including those of epithelial and mesenchymal origin However there are examples of cell types that can be stimulated by TGF β under certain conditions TGF β also induces the accumulation of matrix molecules by stimulating their synthesis as well as inhibiting their degradation Moreover TGF β induces apoptosis of certain cell types thereby restricting their proliferation Overactivity of TGF has been linked to several diseases For instance the effect of TGF on matrix accumulation contributes to fibrotic conditions like glomerulonephritis lung fibrosis and liver cirrhosis ¹ TGF has a very complicated role in cancer that is only beginning to be understood *Elsevier Comprehensive Guide To PGME With Companion Website - Volume 2* Exam, 2009 4 Volumes covering 19 subjects with an extensive summary on each subject 10 years 1999 2008 question papers of All India PGME and AIIMS PGME with answers and explanations This book offers you 6 months FREE access to the Elsevier ExamZone™ website specially designed for PGME preparations Monthly Mock Tests with answers explanations and a subject wise performance summary Simulated tests of recently concluded PGME exams Ask an Expert to clarify your doubts List of
