Handbook Of Lipid Bilayers Second Edition:

Handbook of Lipid Bilayers Derek Marsh, 2013-02-15 Now in its second edition the Handbook of Lipid Bilayers is a groundbreaking work that remains the field's definitive text and only comprehensive source for primary physicochemical data relating to phospholipid bilayers. Along with basic thermodynamic data coverage includes both dynamic and structural properties of phospholipid bilayers. It is an *Handbook of Lipid Bilayers, Second Edition* Derek Marsh, 2013-02-15 Now in its second edition the Handbook of Lipid Bilayers is a groundbreaking work that remains the field's definitive text and only comprehensive source for primary physicochemical data relating to phospholipid bilayers. Along with basic thermodynamic data coverage includes both dynamic and structural properties of phospholipid bilayers. It is an indispensable reference for users of bilayer model membranes and liposome delivery systems and for those interested in the biophysics of membrane structure. Each chapter in the second edition contains considerable amounts of explanation and elaboration including in many cases extensive analysis of structural connections between the data. New in the Second Edition: Chapters on crystal structures of phospholipids include new structures and more comprehensive data on bond lengths, bond angles and torsion angles and all coordinates are Cartesian. Wide angle data is indexed whenever possible to characterize chain packing modes in gel and crystalline lamellar phases. Low angle data are analyzed in terms of the lipid and water thicknesses. Headgroup separations in electron density profiles for phospholipids are included and a separate section is devoted to the in-depth analysis of electron density profiles that provides the most detailed structural information on fluid lamellar phases. Phase diagrams of phospholipid mixtures are vastly expanded and have been redrawn in standardized format to aid intercomparison. Cholesterol including ternary systems is now featured. New sections on titration calorimetry and much extended data on the temperature dependence of transfer rates. The greatly expanded chapter on bilayer-bilayer interactions features new and detailed information on the components of interbilayer pressures.

The Biomedical Engineering Handbook 1 Joseph D. Bronzino, 2000-02-15 CRC Handbook of Solubility Parameters and Other Cohesion Parameters Allan F.M. Barton, 2017-10-19. The CRC Handbook of Solubility Parameters and Other Cohesion Parameters, Second Edition, which includes 17 new sections and 40 new data tables, incorporates information from a vast amount of material published over the last ten years. The volume is based on a bibliography of 2 900 reports including 1 200 new citations. The detailed careful construction of the handbook develops the concept of solubility parameters from empirical thermodynamic and molecular points of view and demonstrates their application to liquid, gas, solid, and polymer systems.

Structure and Dynamics of Membranes R. Lipowsky, E. Sackmann, 1995-06-15. The first volume of the Handbook deals with the amazing world of biomembranes and lipid bilayers. Part A describes all aspects related to the morphology of these membranes, beginning with the complex architecture of biomembranes, continues with a description of the bizarre morphology of lipid bilayers, and concludes with technological applications of these membranes. The first two chapters deal with biomembranes, providing an introduction to the membranes of eucaryotes and a description of the evolution of membranes. The following chapters are concerned with different aspects of lipids, including the physical properties of model membranes composed of lipid-protein mixtures, lateral phase separation of lipids and proteins, and measurement of lipid-protein bilayer diffusion. Other chapters deal with the flexibility of fluid bilayers, the closure of bilayers into vesicles, which attain a large variety of different shapes, and applications of lipid vesicles and liposomes. Part B covers membrane adhesion, membrane fusion, and the interaction of biomembranes with polymer networks such as the cytoskeleton. The first two chapters of this part discuss the generic interactions of membranes from the conceptual point of view. The following two chapters summarize the experimental work on two different bilayer systems. The next chapter deals with the process of contact formation, focal bounding, and macroscopic contacts between cells. The cytoskeleton within eucaryotic cells consists of a network of relatively stiff filaments, of which three different types of filaments have been identified. As explained in the next chapter, much has been recently learned about the interaction of these filaments with the cell membrane. The final two chapters deal with membrane fusion.
