Computational Logic Dov M. Gabbay, Jörg H. Siekmann, John Woods, 2014-12-09 Handbook of the History of Logic brings to the development of logic the best in modern techniques of historical and interpretative scholarship. Computational logic was born in the twentieth century and evolved in close symbiosis with the advent of the first electronic computers and the growing importance of computer science, informatics and artificial intelligence. With more than ten thousand people working in research and development of logic and logic-related methods, with several dozen international conferences and several times as many workshops addressing the growing richness and diversity of the field and with the foundational role and importance these methods now assume in mathematics, computer science, artificial intelligence, cognitive science, linguistics, law and many engineering fields where logic-related techniques are used inter alia to state and settle correctness issues, the field has diversified in ways that even the pure logicians working in the early decades of the twentieth century could have hardly anticipated. Logical calculi which capture an important aspect of human thought are now amenable to investigation with mathematical rigour and computational support and fertilized the early dreams of mechanised reasoning. *Calculus* The Dartmouth Conference in 1956, generally considered as the birthplace of artificial intelligence, raised explicitly the hopes for the new possibilities that the advent of electronic computing machinery offered: logical statements could now be executed on a machine with all the far

reaching consequences that ultimately led to logic programming deduction systems for mathematics and engineering logical design and verification of computer software and hardware deductive databases and software synthesis as well as logical techniques for analysis in the field of mechanical engineering This volume covers some of the main subareas of computational logic and its applications Chapters by leading authorities in the field Provides a forum where philosophers and scientists interact Comprehensive reference source on the history of logic *Logic: Reference Book for Computer Scientists* Lech T. Polkowski, 2023-10-03 The book gives all interested in computer science a deep review of relevant aspects of logic In its scope are classical and non classical logics The content will be valid as well for those interested in linguistic philosophy and many other areas of research both in humane and technical branches of science as logic permeates all genuine realms of science The book contains a substantial part of classical results in logic like those by G del Tarski Church and Rosser as well as later developments like many valued logics logics for knowledge engineering first order logics plus inductive definitions The exposition is rigorous yet without unnecessary abstractionism so it should be accessible to readers from many disciplines of science Each chapter contains a problem section and problems are borrowed from research publications which allows for passing additional information and it allows readers to test their skills Extensive bibliography of 270 positions directs readers to research works of importance **Rewriting Techniques and Applications** Robert Nieuwenhuis, 2007-03-06 The refereed proceedings of the 14th International Conference on Rewriting Techniques and Applications RTA 2003 held in Valencia Spain in June 2003 The 26 revised regular papers and 6 system descriptions presented together with 3 invited contributions were carefully reviewed and selected from 61 submissions All current aspects of rewriting are addressed **A Guided Tour of Artificial Intelligence Research** Pierre Marquis, Odile Papini, Henri Prade, 2020-05-08 The purpose of this book is to provide an overview of AI research ranging from basic work to interfaces and applications with as much emphasis on results as on current issues It is aimed at an audience of master students and Ph D students and can be of interest as well for researchers and engineers who want to know more about AI The book is split into three volumes the first volume brings together twenty three chapters dealing with the foundations of knowledge representation and the formalization of reasoning and learning Volume 1 Knowledge representation reasoning and learning the second volume offers a view of AI in fourteen chapters from the side of the algorithms Volume 2 AI Algorithms the third volume composed of sixteen chapters describes the main interfaces and applications of AI Volume 3 Interfaces and applications of AI This second volume presents the main families of algorithms developed or used in AI to learn to infer to decide Generic approaches to problem solving are presented ordered heuristic search as well as metaheuristics are considered Algorithms for processing logic based representations of various types first order formulae propositional formulae logic programs etc and graphical models of various types standard constraint networks valued ones Bayes nets Markov random fields etc are presented The volume also focuses on algorithms which have been developed to simulate specific intelligent processes such as planning playing learning

and extracting knowledge from data Finally an afterword draws a parallel between algorithmic problems in operation research and in AI

Artificial Mathematical Intelligence Danny A. J. Gómez Ramírez, 2020-10-23 This volume discusses the theoretical foundations of a new inter and intra disciplinary meta research discipline which can be succinctly called cognitive metamathematics with the ultimate goal of achieving a global instance of concrete Artificial Mathematical Intelligence AMI In other words AMI looks for the construction of an ideal global artificial agent being able to co solve interactively formal problems with a conceptual mathematical description in a human style way It first gives formal guidelines from the philosophical logical meta mathematical cognitive and computational points of view supporting the formal existence of such a global AMI framework examining how much of current mathematics can be completely generated by an interactive computer program and how close we are to constructing a machine that would be able to simulate the way a modern working mathematician handles solvable mathematical conjectures from a conceptual point of view The thesis that it is possible to meta model the intellectual job of a working mathematician is heuristically supported by the computational theory of mind which posits that the mind is in fact a computational system and by the meta fact that genuine mathematical proofs are in principle algorithmically verifiable at least theoretically The introduction to this volume provides then the grounding multifaceted principles of cognitive metamathematics and at the same time gives an overview of some of the most outstanding results in this direction keeping in mind that the main focus is human style proofs and not simply formal verification The first part of the book presents the new cognitive foundations of mathematics program dealing with the construction of formal refinements of seminal meta mathematical notions and facts The second develops positions and formalizations of a global taxonomy of classic and new cognitive abilities and computational tools allowing for calculation of formal conceptual blends are described In particular a new cognitive characterization of the Church Turing Thesis is presented In the last part classic and new results concerning the co generation of a vast amount of old and new mathematical concepts and the key parts of several standard proofs in Hilbert style deductive systems are shown as well filling explicitly a well known gap in the mechanization of mathematics concerning artificial conceptual generation

Graph Transformations Hartmut Ehrig, Reiko Heckel, Grzegorz Rozenberg, Gabriele Taentzer, 2008-09-18 This book constitutes the refereed proceedings of the 4th International Conference on Graph Transformations ICGT 2008 held in Leicester UK in September 2008 The 27 revised full papers presented together with 5 tutorial and workshop papers and 3 invited lectures were carefully selected from 57 submissions All current aspects in graph drawing are addressed including hypergraphs and termgraph rewriting applications of graph transformation execution of graph transformations compositional systems validation and verification graph languages and special transformation concepts as well as patterns and model transformations In addition the volume contains 17 short papers of the ICGT 2008 Doctoral Symposium

Integration of World Knowledge for Natural Language Understanding Ekaterina Ovchinnikova, 2012-02-15 This book concerns non linguistic knowledge

required to perform computational natural language understanding NLU The main objective of the book is to show that inference based NLU has the potential for practical large scale applications First an introduction to research areas relevant for NLU is given We review approaches to linguistic meaning explore knowledge resources describe semantic parsers and compare two main forms of inference deduction and abduction In the main part of the book we propose an integrative knowledge base combining lexical semantic ontological and distributional knowledge A particular attention is paid to ensuring its consistency We then design a reasoning procedure able to make use of the large scale knowledge base We experiment both with a deduction based NLU system and with an abductive reasoner For evaluation we use three different NLU tasks recognizing textual entailment semantic role labeling and interpretation of noun dependencies *Scientific and Technical Aerospace Reports*, 1991 Logics and Type Systems in Theory and Practice Venzio Capretta,Robbert Krebbers,Freek Wiedijk,2024-05-21 This Festschrift dedicated to Herman Geuvers on the occasion of his 60th birthday contains papers written by many of his closest collaborators Herman Geuvers is a full professor at Radboud University Nijmegen and holds a part time professorship at Eindhoven University of Technology He received his PhD from Radboud University in 1993 and he was promoted to full professor in Computer Assisted Reasoning in 2006 Prof Geuvers is an internationally renowned researcher in the field of proof assistants logic in computer science lambda calculus and type theory He has been a steering committee chair of the TYPES and FSCD conferences chair of related EU Cost Action projects and program chair or editor of related conferences and special issues in the area of computer science logic He is a successful generous and inspiring advisor and educator He has been director of education and director of research of the Computer Science Institute at Radboud University Nijmegen and he is currently chair of the examination board of computer science and chair of the board of the Institute for Programming Research and Algorithmics a Dutch national inter university research school The contributions in this volume reflect Prof Geuvers main research interests **Mathematical Foundations of Computer Science 1997** Igor Privara,1997-08-13 This book constitutes the refereed post conference proceedings of the Second International Andrei Ershov Memorial Conference on System Informatics held in Akademgorodok Novosibirsk Russia in June 1996 The 27 revised full papers presented together with 9 invited contributions were thoroughly refereed for inclusion in this volume The book is divided in topical sections on programming methodology artificial intelligence natural language processing machine learning dataflow and concurrency models parallel programming supercompilation partial evaluation object oriented programming semantics and abstract interpretation programming and graphical interfaces and logic programming *Intelligent Computer Mathematics* Serge Autexier,Jacques Calmet,David Delahaye,P.D.F.
