Advanced Ceramic Coatings for Energy Applications Ram K. Gupta, Amir Motallebzadeh, Saeid Kakooei, Tuan Anh Nguyen, Ajit Behera, 2024-02-16 Smart ceramic coatings containing multifunctional components are now finding application in transportation and automotive industries in electronics and energy sectors in aerospace and defense and in industrial goods and healthcare Their wide

application and stability in harsh environments are only possible due to the stability of the inorganic components that are used in ceramic coatings. Ceramic coatings are typically silicon nitride, chromia, hafnia, alumina, magnesia, silica, silicon carbide, titania, and zirconia based compositions. The increased demand for these materials and their application in energy transportation and the automotive industry are considered to be the main drivers. *Advanced Ceramic Coatings for Energy Applications* covers recent developments in conducting electrodes, photovoltaics, solar cells, battery applications, fuel cells, electrocatalysts, photocatalysts, and supercapacitors. The book is one of four volumes that together provide a comprehensive resource in the field of Advanced Ceramic Coatings, also including titles covering fundamentals, manufacturing, and classification, biomedical applications, and emerging applications. The books will be extremely useful for academic and industrial researchers and practicing engineers who need to find reliable and up to date information about recent progresses and new developments in the field of advanced ceramic coatings. It will also be of value to early career scientists providing background knowledge to the field. Includes comprehensive coverage of advanced ceramic coatings for energy applications. Features the latest progress and recent technological developments. Includes comparisons to other coatings types e.g. polymers, metals, and enamel to demonstrate potential limitations and differences. Contains extensive case studies and worked examples.
