Organizations Peter J. Fos, David J. Fine, 2012-06-28 *Managerial Epidemiology for Health Care Organizations* provides readers with a thorough and comprehensive understanding of the application of epidemiological principles to the delivery of health care services and management of health care organizations. As health administration becomes evidence and population based, it becomes critical to understand the impact of disease on populations of people in a service area. This book also addresses the need of health organizations to demonstrate emergency preparedness and respond to bioterrorism threats. A follow up to the standard text in the field, this book introduces core epidemiology principles and clearly illustrates their essential applications in planning, evaluating and managing health care for populations. This book demonstrates how health care executives can incorporate the practice of epidemiology into their various management functions and is rich with current examples, concepts and case studies that reinforce the essential theories, methods and applications of managerial epidemiology. *Portico*, 2000

The Production of Hospice Space Sarah McGann, 2016-03-03 Challenging the widely held notion of a hospice as a building or a place, this book argues that it should instead be a philosophy of care. It proposes that the positive and negative impact that space can have in the pursuit of an ideal such as hospice care has previously been underestimated. Whether it be a purpose built hospice, part of a hospital, a nursing home or within the home, a hospice is anchored by space and spatial practices and these spatial practices are critical for a holistic approach to dying with dignity. Such spatial practices are understood as part of a broad architectural, social, conceptual and theoretical process. By linking health, social and architectural theory and establishing conceptual principles, this book defines hospice as a philosophy that is underpinned by space and spatial practice. In putting forward the notion of hospice space removed from the bounds of a specific building type, it suggests that hospice philosophy could and should be available within any setting of choice where the spatial practices support that philosophy, be it home, nursing home, hospice or hospice friendly hospitals.

Obsolescence Daniel M. Abramson, 2016-02-12 In our architectural pursuits we often seem to be in search of something newer, grander or more efficient and this phenomenon is not novel. In the spring of 1910 hundreds of workers labored day and night to demolish the Gillender Building in New York, once the loftiest office tower in the world, in order to make way for a taller skyscraper. The New York Times puzzled over those who would sacrifice the thirteen year old structure as ruthlessly as though it were some ancient shack. In New York alone the Gillender joined the original Grand Central Terminal, the Plaza Hotel, the Western Union Building and the Tower Building on the list of just one generation's razed metropolitan monuments. In the innovative and wide ranging *Obsolescence* Daniel M. Abramson investigates this notion of architectural expendability and the logic by which buildings lose their value and utility. The idea that the new necessarily outperforms and makes superfluous the old, Abramson argues, helps people come to terms with modernity and capitalism's fast paced change. *Obsolescence* then gives an unsettling experience purpose and meaning. Belief in obsolescence, as Abramson shows, also

profoundly affects architectural design In the 1960s many architects worldwide accepted the inevitability of obsolescence experimenting with flexible modular designs from open plan schools offices labs and museums to vast megastructural frames and indeterminate building complexes Some architects went so far as to embrace obsolescence s liberating promise to cast aside convention and habit envisioning expendable short life buildings that embodied human choice and freedom Others we learn were horrified by the implications of this ephemerality and waste and their resistance eventually set the stage for our turn to sustainability the conservation rather than disposal of resources Abramson s fascinating tour of our idea of obsolescence culminates in an assessment of recent manifestations of sustainability from adaptive reuse and historic preservation to postmodernism and green design which all struggle to comprehend and manage the changes that challenge us on all sides

Multimodality in the Built Environment Louise J. Ravelli, Robert J. McMurtrie, 2015-11-19 This book provides an extended exploration of the multimodal analysis of spatial three dimensional texts of the built environment culminating in a holistic approach termed Spatial Discourse Analysis SpDA Based on existing frameworks of multimodal

analysis this book applies adapts and extends these frameworks to spatial texts The authors argue that choices in spatial design create meanings about what we perceive and how we can or should behave within spatial texts influence how we feel in and about those spaces and enable these texts to function as coherent wholes Importantly a spatial text once built is also a resource which is then used and an essential aspect of understanding these texts is to consider what users themselves contribute to the meaning potential of these texts The book takes the metafunctional approach familiar from Systemic Functional Linguistics SFL and foregrounds each metafunction in turn textual interpersonal experiential and logical in relation to the detailed analysis of a particular spatial text

Landscapes of Mobility Jennifer Johung, 2016-04-22 Our world is unquestionably one in which

ubiquitous movements of people goods technologies media money and ideas produce systems of flows Comparing case studies from across the world including those from Benin the United States India Mali Senegal Japan Haiti and Romania this book focuses on quotidian landscapes of mobility Despite their seemingly familiar and innocuous appearances these spaces exert tremendous control over our behavior and activities By examining and mapping the politics of place and motion this book analyzes human beings embodied engagements with their built world and provides diverse perspectives on the ideological and political underpinnings of landscapes of mobility In order to describe landscapes of mobility as a historically socially and politically constructed condition the book is divided into three sections objects contacts and flows The first section looks at elements that constitute such landscapes including mobile bodies buildings and practices across multiple geographical scales As these variable landscapes are reconstituted under particular social economic ecological and political conditions the second section turns to the particular practices that catalyze embodied relations within and across such spaces Finally the last section explores how the flows of objects bodies interactions and ecologies are represented presenting a critical comparison of the means by which relations processes and exchanges are captured depicted reproduced and re embodied

The Architecture of Use Stephen Grabow, Kent Spreckelmeyer, 2014-10-03 By analyzing ten examples of buildings that embody the human experience at an extraordinary level this book clarifies the central importance of the role of function in architecture as a generative force in determining built form Using familiar twentieth century buildings as case studies the authors present these from a new perspective based on their functional design concepts Here Grabow and Spreckelmeyer expand the definition of human use to that of an art form by re evaluating these buildings from an aesthetic and ecological view of function Each building is described from the point of view of a major functional concept or idea of human use which then spreads out and influences the spatial organization built form and structure In doing so each building is presented as an exemplar that reaches beyond the pragmatic concerns of a narrow program and demonstrates how functional concepts can inspire great design evoke archetypal human experience and help us to understand how architecture embodies the deeper purposes and meanings of everyday life
