Healthy Buildingsa Design Primer For A Living Environment:

Healthy buildings; a design primer for a living environment B. Holdsworth, 1992 Healthy Buildings W. J. Holdsworth, Antony Sealey, 1992 According to the WHO 30per cent of buildings adversely affect the health of the people living or working in them This book takes the health of a building s users as an essential design element and provides a model for designing out harmful elements and designing in those which are safe and pleasant **Healthy Buildings** W. J. Holdsworth, Antony Sealey, **The Whole Building Handbook** Varis Bokalders, Maria Block, 2010-02-09 The Whole Building Handbook is a compendium of all the issues and strategies that architects need to understand to design and construct sustainable buildings for a sustainable society The authors move beyond the current definition of sustainability in architecture which tends to focus on energy efficiency to include guidance for architecture that promotes social cohesion personal health renewable energy sources water and waste recycling systems permaculture energy conservation and crucially buildings in relation to their place The authors offer a holistic approach to sustainable architecture and authoritative technical advice on How to design and construct healthy buildings through choosing suitable materials healthy service systems and designing a healthy and comfortable indoor climate including solutions for avoiding problems with moisture radon and noise as well as how to facilitate cleaning and maintenance How to design and construct buildings that use resources efficiently where heating and cooling needs and electricity use is minimized and water saving technologies and garbage recycling technologies are used How to close organic waste sewage heat and energy cycles For example how to design a sewage system that recycles nutrients Includes a section on adaptation of buildings to local conditions looking at how a site must be studied with respect to nature climate and community structure as well as human activities The result is a comprehensive thoroughly illustrated and carefully structured textbook and reference *Building Materials, Health and Indoor Air Quality* Tom Woolley, 2016-10-04 The impact of building materials and construction methods on the health and wellbeing of occupants is often underestimated This book is an essential guide to understanding and avoiding hazardous materials and poor air quality in buildings The author covers a range of issues beginning with an explanation of how buildings work and how this influences the health of occupants and users The text covers Ventilation air conditioning and indoor air quality Damp and mould Asthma and respiratory problems Cancer and endocrine disorders Radiation and radon Hazardous building materials used in construction Indoor air quality and emissions Ecological alternatives and approaches and remedies for sick buildings The book also guides the reader through the confusing world of regulations EU and international guidelines and certifications and provides a critical analysis of different theories of healthy buildings and philosophies Written in a clear and accessible style this book provides indispensable advice and information to anyone wishing to better understand healthy buildings and materials It is essential reading for architects surveyors public health professionals facilities managers and environmentalists *Sustainability in Energy and Buildings* John Littlewood, Robert J.

Howlett, Alfonso Capozzoli, Lakhmi C. Jain, 2019-10-26 This volume contains the proceedings of the 11th KES International Conference on Sustainability and Energy in Buildings 2019 SEB19 held in Budapest 4th 5th July 2019 organised by KES International in partnership with Cardiff Metropolitan University Wales UK SEB 19 invited contributions on a range of topics related to sustainable buildings and explored innovative themes regarding sustainable energy systems The aim of the conference was to bring together researchers and government and industry professionals to discuss the future of energy in buildings neighbourhoods and cities from a theoretical practical implementation and simulation perspective The conference formed an exciting chance to present interact and learn about the latest research and practical developments on the subject The conference attracted submissions from around the world Submissions for the Full Paper Track were subjected to a blind peer review process Only the best of these were selected for presentation at the conference and publication in these proceedings It is intended that this volume provides a useful and informative snapshot of recent research developments in the important and vibrant area of Sustainability in Energy and Buildings **Ethics and Urban Design** Gideon S.

Golany, 1995-08-01 The city according to urban design scholar Gideon Golany is the largest and most complicated project ever produced by humankind In *Ethics and Urban Design* he challenges design professionals to reexamine their basic assumptions about the urban environment and offers design strategies based on enduring human values In search of answers to the paradoxical problems of the modern city Golany takes the reader through the sweep of human settlements from the dawn of civilization to the present His authoritative examination of the genesis of the city is illuminated by instructive examples of early urban centers Mesopotamia the Indus River Valley the Egyptian cities of the Nile and the capital cities of ancient China all are examined in the light of what made them work as major centers of human activity What Golany finds in the success stories of the past are cohesive sociocultural values that shaped the design of homes neighborhoods and cities These ethical values helped to maintain an equilibrium within the society that permeated its natural social and human made environments In the present era conversely he finds a major disconnection between human values and the ethics of technology which has resulted in confusion imbalance and dehumanization To help designers gain a perspective on possible solutions Golany explains leading comprehensive design strategies including the valley theory the urban border zone concept and the regional concept of Patrick Geddes In the case study of contemporary Holland he details what a small densely populated country has been able to achieve through design planning rooted in environmental ethics *Future Frontiers for Urban Design* the culminating section of this groundbreaking book opens with Golany's vision of the future city He examines the issues of thermal performance and climate as they relate to urban design and offers the concept of geospace the earth enveloped habitat Buttressing his presentation with detailed information on the mechanics of geospace Golany describes case studies of the successful use of earth enveloped habitats in China and Tunisia He makes a powerful argument for the geospace city as a renewal of ancient traditions that can restore the vital equilibrium between nature and human settlements that we seem to

have lost Ethics and Urban Design is a distinguished scholar's analysis and prescription for the city it offers an abundance of stimulating ideas for the architects, designers and planners who have assumed responsibility for its future. Ethics Urban Design draws on historical examples and contemporary case studies from around the world to illustrate urban design strategies that can help restore equilibrium to the natural social and built environments of the city. In this stimulating book, urban design scholar Gideon Golany offers architects, designers and planners both an in-depth analysis of the fundamental issues of urban design and practical options for the design of the future city. Examines the genesis and development of the city from the earliest settlements to the rise of urban society. Presents urban design strategies based on historical examples of early urban centers including Mesopotamia, the Indus River Valley, Egypt and China. Offers case studies of environmental success stories from Europe, Asia and Africa. Details geospace design options, the use of underground space for diversified land use, housing and transportation. Fully illustrated with over 80 photographs, drawings and diagrams.

Building Adaptation James Douglas, 2006. Introduction, Feasibility, Principles of Building Conversion, Adaptive fuses, Lateral extensions, Vertical extensions, Structural alterations, Principles of refurbishment, Further aspects of refurbishment, Sustainable adaptation, Implementation, Appendices.

Building Pathology David S. Watt, 2009-05-12. Building pathology provides an interdisciplinary approach to the study of defects and performance in order to develop appropriate remedial and management solutions. It considers how the structure and materials of a building relate to its environment, its occupants and the way the building is used, so as to develop a better understanding of building failures. This book provides a well-illustrated introduction to the discipline of building pathology, bridging the gap between current approaches to the surveying of buildings and the detailed study of defect diagnosis, prognosis and remediation. It features a number of case studies and a detailed set of references and further reading. This second edition has been updated to reflect changes in legislation, guidance and construction and provides new case studies that demonstrate the breadth and depth of the subject.

Environmental Handbook for Building and Civil Engineering Projects, 1994. This handbook provides practical advice and guidance on the environmental issues that are likely to be encountered at each stage of a building or civil engineering project.

Stay Cool Holger Koch-Nielsen, 2013-06-17. In hot, dry or warm, humid climates, more than half of the urban peak load of energy consumption is used to satisfy air conditioning demands alone. Since the urbanization rate in developing countries is extreme, the pressure placed on energy resources to satisfy the future requirements of the built environment will be great unless new, more cost-effective measures can be introduced. Stay Cool is an essential guide for planning and design using active design principles and passive means to satisfy human comfort requirements specifically in these climate zones based on examples of traditional and modern constructions. The book demonstrates how a design strategy for urban environments and individual buildings incorporating naturally occurring resources and specific energy-efficient technologies can create a location, form and structure that promote significant energy savings. Such strategies can be applied to low-cost housing or indeed to any

other buildings in order to improve comfort with passive means and low energy budgets Following an outline of climatic issues characteristics and thermal comfort requirements the book details the available techniques and technologies that can be used to shape both built and external environments the building envelope material selections and natural ventilation and cooling methods to satisfy both human requirements and the need for energy efficiency It also includes an active design checklist and summary of available design checking tools a rehabilitation guide for existing urban building and external environments and solar charts Planners architects engineers technicians and building designers will find *Stay Cool* an inspirational guide and an essential reference when working with planning and design of the built environment in hot dry and warm humid climate zones It will also be of benefit to students academics and researchers with an interest in sustainable and energy efficient architecture techniques and practice

Health Performance of Housing Evert Hasselaar, 2006 Human health is a condition influenced by many aspects genetic predisposition food and water lifestyle age and the physical and social environment Outdoor hazards penetrate the house and add to the indoor hazards The physical housing conditions and also occupant behaviour create health hazards In maintenance policy and renovation projects the opportunities to reduce health risks and adapt houses to the health needs of households are not used to their full potential Health criteria were until recently poorly integrated into sustainable building and some technical innovations to save energy are associated with health related complaints Good diagnosis of environmental problems is often a bottleneck for home owners and housing managers Better insight into health performance qualities and a clear framework and common language can improve health performance

Building Healthy Homes Phyllis F. Adams, Sean P. Gimbel, 1994 **An Automated Survey Method for Environmental Quality Assessment in Office Buildings** Anne Veronica Baughman, 1997 *Sick Building Syndrome* Sabah A. Abdul-Wahab, 2011-05-03 This volume throws light on the Sick Building Syndrome in Libraries and other public buildings and the extent to which it is influenced by the internal environment of libraries One of the signs of this disease is that the person suffers from a set of symptoms closely related to his/her presence in the building without the identification of any clear causes and his/her relief of these symptoms when he/she is out of the building Hence the book sheds on the extent to which the interior environment impacts upon the health of the people and the extent to which this is reflected in their performance The book can be used for teaching research and professional reference It concludes with the recommendation that is essential to observe environmental dimensions when designing library and public buildings taking into consideration the expected impact of SBS in library and public buildings on people The significance of the book derives from the fact that it is the first of its kind to examine the issue of the interior environment and SBS of library and public building worldwide

New Scientist and Science Journal, 1992 *New Scientist*, 1992 *Sustainable Architecture* Brian Edwards, 1999 Brian Edwards and a team of expert contributors set out the important sustainable principles in the practice of architecture The second edition outlines the full impact of environmental laws for architects especially those which derive from Europe

This second edition has six new chapters including Photovoltaics and new sections on Water conservation and Sustainable construction It has been updated in line with the changes in European environmental law there are also many more built examples which are fully illustrated A wider range of case studies targeted to the chapter themes is also included Brian Edwards is Professor of Architecture at the University of Huddersfield He is also a member of the RIBA s Environment and Energy Committee and Advisor to Kirklees Council on Agenda 21 An expert team of contributors provide an authoritative guide to sustainable design and the law Comprehensive range of case studies illustrate all aspects of the architect s responsibilities **The First International Conference on the Mediterranean Coastal Environment** Erdal Özhan,1993
