Exploring the Frontiers of Regenerative Cardiovascular Medicine Joshua D. Hutcheson, Julie A. Phillippi, Elena Aikawa, 2019-05-15 This Research Topic celebrates the 50th anniversary of the first heart transplant performed in December of 1967 in Cape Town South Africa Cardiovascular researchers met in South Africa in December 2017 to commemorate this event presenting an opportune time to reflect on the achievements of applied cardiovascular research and highlight forthcoming technology developments that will shape the future of cardiovascular medicine The clinical breakthrough in 1967 offered hope to many patients suffering with cardiac complications and these life saving surgeries continue to have a tremendous impact Tissue shortages surgical risks and complications due to improper host transplant tissue interactions however limit the utility of heart transplants to the most severe cases of cardiac morbidity Recent advances have yielded mechanistic insight into the factors that control cardiovascular tissue maintenance and remodeling The field of regenerative medicine seeks to control these factors to promote in situ tissue regeneration or engineered tissue replacement These exciting new technologies could lead to a renaissance in the treatment of many cardiovascular diseases just as the realization of heart transplantation 50 years ago In this Research Topic researchers and clinicians from regenerative medicine and applied cardiovascular biology provide literature reviews and original manuscripts to demonstrate the trajectory of cardiovascular medicine The contributions vertically integrate advances by clinicians engineers and basic scientists all researching similar topics from different angles and with complementary perspectives Taken together these contributions demonstrate the process of applied cardiovascular research from basic science discoveries to implementation in clinical practice

Cardiovascular Disease Gaetano Santulli, 2021-04-30 According to the most updated epidemiological studies cardiovascular disease remains a leading cause of death in fact despite substantial advances in the care of patients the incidence of cardiovascular disorders continues to increase Therefore the search for novel mechanisms and therapeutics is desperately needed and translational studies represent the best strategy to uncover novel therapeutic targets reduce mortality and improve the quality of life This book gathers original articles and systematic reviews that have both a strong basic research background and clear translational potential All the studies have been peer reviewed by at least two experts in the field These contributions provide an updated systematic overview that examines in

detail the mechanisms of the main cardiovascular and metabolic disorders including ischemic and non ischemic heart failure hypertension thromboembolism atherosclerosis stroke diabetes mellitus dyslipidemia metabolic syndrome valvulopathies peripheral artery disease In the final chapter the functional role of the endothelium in the systemic manifestations of COVID 19 is described *3D Bioprinting in Regenerative Engineering* Ali Khademhosseini, Gulden Camci-Unal, 2018-04-17

Regenerative engineering is the convergence of developmental biology stem cell science and engineering materials science and clinical translation to provide tissue patches or constructs for diseased or damaged organs Various methods have been introduced to create tissue constructs with clinically relevant dimensions Among such methods 3D bioprinting provides the versatility speed and control over location and dimensions of the deposited structures Three dimensional bioprinting has leveraged the momentum in printing and tissue engineering technologies and has emerged as a versatile method of fabricating tissue blocks and patches The flexibility of the system lies in the fact that numerous biomaterials encapsulated with living cells can be printed This book contains an extensive collection of papers by world renowned experts in 3D bioprinting In addition to providing entry level knowledge about bioprinting the authors delve into the latest advances in this technology Furthermore details are included about the different technologies used in bioprinting In addition to the equipment for bioprinting the book also describes the different biomaterials and cells used in these approaches This text Presents the principles and applications of bioprinting Discusses bioinks for 3D printing Explores applications of extrusion bioprinting including past present and future challenges Includes discussion on 4D Bioprinting in terms of mechanisms and applications
