**Software-Intensive Systems: Methods and Principles** Tiako, Pierre F., 2008-07-31. This book addresses the complex issues associated with software engineering environment capabilities for designing real-time embedded software systems. Provided by publisher.      **Autotools** John Calcote, 2010. The GNU Autotools make it easy for developers to create software that is portable across many UNIX-like operating systems. Thousands of open-source software packages use the Autotools, but the learning curve is unfortunately steep and it can be difficult for a beginner to find anything more than basic reference material on using the powerful software suite. In Autotools, author John Calcote begins with an overview of high-level concepts, then tackles more advanced topics like using the M4 macro processor with Autoconf, extending the Automake framework, and building Java and C sources. You'll learn how to Master the Autotools build system to maximize your software's portability. Generate Autoconf configuration scripts to simplify the compilation process. Produce portable makefiles with Automake. Build cross-platform software libraries with Libtool. Write your own Autoconf macros. Autotools also includes a variety of complete projects that you're encouraged to work through to gain a real-world sense of how to become an Autotools practitioner. For example, you'll turn the FLAIM and Jupiter projects, hand-coded makefile-based build systems, into a powerful Autotools-based build system.      **Embedded Software Development** Ivan Cibrario Bertolotti, Tingting Hu, 2017-12-19. Embedded Software Development: The Open Source Approach delivers a practical introduction to embedded software development with a focus on open-source components. This programmer-centric book is written in a way that enables even novice practitioners to grasp the development process as a whole. Incorporating real code fragments and explicit real-world open-source operating system references, in particular FreeRTOS throughout the text, it defines the role and purpose of embedded systems, describing their internal structure and interfacing with software development tools. Examines the inner workings of the GNU compiler collection GCC-based software development system, or in other words, toolchain. Presents software execution models that can be adopted profitably to model and express concurrency. Addresses the basic nomenclature, models, and concepts related to task-based scheduling algorithms. Shows how an open-source protocol stack can be integrated in an embedded system and interfaced with other software components. Analyzes the main components of the FreeRTOS Application Programming Interface (API), detailing the implementation of key operating system concepts. Discusses advanced topics such as formal

verification model checking runtime checks memory corruption security and dependability Embedded Software Development The Open Source Approach capitalizes on the authors extensive research on real time operating systems and communications used in embedded applications often carried out in strict cooperation with industry Thus the book serves as a springboard for further research The Linux Development Platform Rafeeq Ur Rehman,Christopher Paul,2003 Two leading Linux

Alexander N.J. Neidhardt,2017-08-08 This book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the Geodetic Observatory Wettzell Germany It starts with a step by step introduction to developing stable and safe scientific software to run successful software projects The use of software toolboxes is another essential aspect that leads to the application of generative programming An example is a generative network middleware that simplifies communication One of the book s main focuses is on explaining a potential

strategy involving autonomous production cells for space geodetic techniques The complete software design of a satellite laser ranging system is taken as an example Such automated systems are then combined for global interaction using secure communication tunnels for remote access The network of radio telescopes is used as a reference Combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the Global Geodetic Observing System GGOS with regard to Industry 4.0
