SINGLE-OBJECTIVE LINEAR GOAL PROGRAMMING PROBLEM WITH NEUTROSOPHIC NUMBERS Durga Banerjee, Surapati Pramanik, This paper deals with single objective linear goal programming problem with neutrosophic numbers The coefficients of objective function and the constraints are considered as neutrosophic numbers of the form $p \ q \ I$ where $p \ q$ are real numbers and I denotes indeterminacy In the solution process the neutrosophic numbers are transformed into interval numbers

Multi-level linear programming problem with neutrosophic numbers: A goal programming strategy Surapati Pramanik, Partha Pratim Dey, In the paper we propose an alternative strategy for multi level linear programming MLP problem with neutrosophic numbers through goal programming strategy Multi level linear programming problem consists of k levels where there is an upper level at the first level and multiple lower levels at the second level with one objective function at every level

Bi-level Linear Programming Problem with Neutrosophic Numbers Surapati Pramanik, Partha Pratim Dey, The paper presents a novel strategy for solving bi level linear programming problem based on goal programming in neutrosophic numbers environment Bi level linear programming problem comprises of two levels namely upper or first level and lower or second level with one objective at each level The objective function of each level decision maker and the system constraints are considered as linear functions with neutrosophic numbers of the form $p \ q \ I$ where $p \ q$ are real numbers and I represents indeterminacy

Techniques for Bank Asset Liability Management Kyriaki Kosmidou, Constantin Zopounidis, 2006-04-18 Other publications that exist on this topic are mainly focused on the general aspects and methodologies of the field and do not refer extensively to bank ALM. On the other hand the existing books on goal programming techniques do not involve the ALM problem and more specifically the bank ALM one. Therefore there is a lack in the existing literature of a comprehensive text book that combines both the concepts of bank ALM and goal programming techniques and illustrates the contribution of goal programming techniques to bank ALM. This is the major contributing feature of this book and its distinguishing characteristic as opposed to the existing literature. This volume would be suitable for academics and practitioners in operations research management scientists financial managers bank managers economists and risk analysts. The book can also be used as a textbook for graduate courses of asset liability management financial risk management and banking risks.

Investment Portfolio Selection Using Goal Programming Rania Azmi, 2014-10-16 This book provides both practitioners and academics with a scientific approach to portfolio selection using Goal Programming an approach which is capable as far as is possible of achieving a required set of preferences deemed appropriate by a decision maker. Goal Programming is perhaps the most widely used approach in the field of multiple criteria decision making that enables the decision maker to incorporate numerous variations of constraints and goals. The original portfolio selection problem with risk and return optimisation can be viewed as a case of Goal Programming with two objectives. Additional objectives representing other factors such as liquidity can be introduced for a more realistic approach to portfolio selection problems. This book comes in a time where scientific frameworks for investment decision making are absolutely necessary that is after the recent financial and economic crisis where irrational decisions and a misuse of mathematical models had equally fed into the spiral of the financial crisis. The real world decision problems are usually changeable complex and resist treatment with conventional approaches. Therefore the optimisation of a single objective subject to a set of rigid constraints is in most cases unrealistic and that is why Goal Programming was introduced in an attempt to eliminate or at least mitigate this shortcoming. Most mathematical models are based on very strong theoretical assumptions which are not entirely respected by markets in practice. In contrast Goal Programming models are based on real world cases where the most feasible solution is sought as

opposed to an ideal simplified solution Therefore this book provides practitioners with a new and superior scientific framework for investment decision making while aiming to stimulate further research and development Moreover the book provides scientific approaches for portfolio selection with Goal Programming which will provide added value for practitioners in complementing their financial expertise with a sound scientific decision making framework Practical Goal Programming Dylan Jones,Mehrdad Tamiz,2010-03-10 Practical Goal Programming is intended to allow academics and practitioners to be able to build effective goal programming models to detail the current state of the art and to lay the foundation for its future development and continued application to new and varied fields Suitable as both a text and reference its nine chapters first provide a brief history fundamental definitions and underlying philosophies and then detail the goal programming variants and define them algebraically Chapter 3 details the step by step formulation of the basic goal programming model and Chapter 4 explores more advanced modeling issues and highlights some recently proposed extensions Chapter 5 then details the solution methodologies of goal programming concentrating on computerized solution by the Excel Solver and LINGO packages for each of the three main variants and includes a discussion of the viability of the use of specialized goal programming packages Chapter 6 discusses the linkages between Pareto Efficiency and goal programming Chapters 3 to 6 are supported by a set of ten exercises and an Excel spreadsheet giving the basic solution of each example is available at an accompanying website Chapter 7 details the current state of the art in terms of the integration of goal programming with other techniques and the text concludes with two case studies which were chosen to demonstrate the application of goal programming in practice and to illustrate the principles developed in Chapters 1 to 7 Chapter 8 details an application in healthcare and Chapter 9 describes applications in portfolio selection Operations Research and Management Science Handbook A. Zanakis, Georgios Doukidis, Constantin Zopounidis, 2013-04-17 This chapter describes a study conducted at the Swinburne University of Technology in Australia in their School of Business The study was to explore the applicability of a judgment analytic decision support system to the assessment of the likelihood of an applicant being selected for admission to the School's Graduate Certificate in Business Administration GCBA program The likelihood of a program administrator selecting a particular applicant is directly linked to the assessment of the likelihood of that applicant's success in the GCBA program The purpose of this study in effect was to analyze the administrative judgment process in assessment of an applicant's likelihood of success in the program THE PROCESS OF HUMAN JUDGMENT Human judgment is a process through which an individual uses social information to make decisions The social information is obtained from an individual's environment and is interpreted through the individual's cognitive image of the environment The cognitive image provides a representation of the environment based on past experiences and training and essentially predisposes the person to respond to social information in predictable ways An individual's policies or beliefs about the environment represent these patterns Human judgments are based then upon one's interpretation of available information They are probability statements about one's environment and how one reacts to it This condition leads to the human judgment process being inherently limited It is fundamentally a covert process It is seldom possible for an individual to accurately describe his or her judgment process accurately Recent Theories and Applications for Multi-Criteria Decision-Making Aouadni, Sourour, Aouadni,

Murty,2010-03-14 Linear programming LP modeling and optimization are very much the fundamentals of OR and no academic program is complete without them No matter how highly developed one s LP skills are however if a fine appreciation for modeling isn t developed to make the best use of those skills then the truly best solutions are often not realized and efforts go wasted Katta Murty studied LP with George Dantzig the father of linear programming and has written the graduate level solution to that problem While maintaining the rigorous LP instruction required Murty s new book is unique in his focus on developing modeling skills to support valid decision making for complex real world problems He describes the approach as intelligent modeling and decision making to emphasize the importance of employing the best expression of actual problems and then applying the most computationally effective and efficient solution technique for that model
