**Green Indonesia** Ilsa Sharp, 1994-06      **Ecology of Insular Southeast Asia** Friedhelm Goltenboth, Kris H. Timotius, Paciencia P. Milan, Josef Margraf, 2006-12-07 The textbook entitled Tropical Ecology of Southeast Asia The Indonesian Archipelago unfolds in its 5 major chapters with 20 subchapters on more than 500 pages with more than 300 figures the basic principles of ecology with examples mainly coming from the Indonesian Archipelago After an introduction describing the geography geology and climate of the region the second chapter is dedicated to marine and freshwater ecosystems Chapters on the functional ecology of seagrass beds coral reefs open ocean and deep sea are followed by information on lotic and lentic freshwater ecosystems In chapter III ecotones and special ecosystems of the archipelago are in focus The ecology and ecosystems of shore and tidal flats mangroves estuaries and soft bottom shores caves small islands grasslands and savannas are described The forest ecosystems with beach forest tropical lowland evergreen rainforest some special forest systems and mountain forests form the contents of chapter IV The final chapter V is dealing with agroecosystems and human ecology The main focus in this chapter is ricefield ecology landuse systems and social ecology including the advent of man and the development and expansion of man influencing this archipelago An extended glossary and bibliography is added as well as tables of abbreviations conversion factors international system of units and measurements or SI and a geological time table and systematics The index gives access to important keywords and relevant information spread throughout the contents of the book The textbook will certainly be useful to teachers lecturers and their students at university and college level It also gives an overview about insular ecology of the vast Indonesian archipelago to any interested person or working ecologist Focuses on the tropical ecology and insular ecosystems and biodiversity of Indonesia as well as the agroecology of humid tropics Contains over 300 figures Provides an extended glossary and bibliography as well as tables of abbreviations conversion factors international system of units and a geological time table Easy to use index gives access to important keywords used throughout the text      *Green Malaysia* Premilla Mohanlal, 2002 This text celebrates everything about the Malaysian rainforest its intricate ecosystem dynamism and various life forms      The World Commission on Protected Areas, 2nd Southeast Asia Regional Forum, Pakse, Lao PDR, 6-11 December 1999: Papers presented IUCN World Commission on Protected Areas. Southeast Asia Regional Forum, 2000      *Indonesia Circle*, 1994      **The Tropical Rain Forest** Marius Jacobs, 2012-12-06 In recent years tropical forests have received more attention and have been the subject of greater environmental concern than any other kind of vegetation There is an increasing public awareness of the importance of these forests not only as a diminishing source of countless products used by mankind nor for their effects on soil stabilization and climate but as unrivalled sources of what today we call biodiversity Threats to the continued existence of the forests represent threats to tens of thousands of species of organisms both plants and animals It is all the more surprising therefore that there have been no major scientific accounts published in recent years since the classic handbook by Paul W

Richards The Tropical Rain Forest in 1952 Some excellent popular accounts of tropical rain forests have been published including Paul Richard s The Life of the Jungle and Catherine Caulfield s In the Rainforest and Jungles edited by Edward Ayensu There have been numerous often conflicting assessments of the rate of conversion of tropical forests to other uses and explanations of the underlying causes and in 1978 UNESCO UNEPI FAO published a massive report The Tropical Rain Forest which although full of useful information is highly selective and does not fully survey the enormous diversity of the forests

**Rainforest Organizations** Steve Shipp,1997 Rainforests home to more than half of all plant and animal species on earth while covering less than six percent of the world s land area have intricate ecosystems with multitudes of animal and plant species including humans Yet deforestation of the rainforests has greatly increased in the past half century Ten thousand years ago rainforests covered an estimated 9 5 million square miles but as millions of trees are lost daily to agricultural and commercial development scientific studies project the reduction of rainforests to six million square miles by the year 2000 and 3 5 million square miles by 2050 Numerous scientific political conservationist public information and other organizations have been formed to address every aspect of rainforests over 120 worldwide can be found in this directory Each entry lists the address phone number contact person e mail or Internet address if available mission statement or goals publications and often the group s history and current projects All listed agencies and organizations readily accept queries for information about rainforests and most invite participation in their activities and projects
