Kenneth J. White

Greene Econometrics Solution Manual:

Econometrics, 2nd Rev. Ed Badi Hani Baltagi, 1998 This reference introduces the basic econometric methods and the underlying assumptions behind them. It also includes a simple and concise treatment of more advanced topics in time series, spatial correlation, limited dependent variables and panel data models, as well as specification testing, Gauss-Newton regressions and regression diagnostics. The strengths of this book lie in presenting difficult material in a simple yet rigorous manner. In addition, the book features a set of empirical illustrations that demonstrate some of the basic results. The empirical exercises are solved using several econometric software packages.

Econometrics Badi H. Baltagi, 2007-11-21 Here at last is the fourth edition of the textbook that is required reading for economics students as well as those practising applied economics. Not only does it teach some of the basic econometric methods and the underlying assumptions behind them, but it also includes a simple and concise treatment of more advanced topics from spatial correlation to time series analysis. This book's strength lies in its ability to present complex material in a simple yet rigorous manner. This superb fourth edition updates identification and estimation methods in the simultaneous equation model. It also reviews the problem of weak instrumental variables as well as updating panel data methods.

Econometrics Badi Hani Baltagi, 2002 As well as specification testing, Gauss-Newton regressions and regression diagnostics. In addition, the book features a set of empirical illustrations that demonstrate some of the basic results. The empirical exercises are solved using several econometric software packages.

Solutions Manual for Econometrics Badi H. Baltagi, 2013-03-14 This manual provides solutions to selected exercises from each chapter of *Econometrics* by Badi H. Baltagi, starting with Chapter 2. For the empirical exercises, some SAS programs are provided to replicate the results. Most graphs are plotted using EViews. Some of the problems and solutions are obtained from *Econometric Theory* (ET) and these are reprinted with the permission of Cambridge University Press. I would like to thank Peter C. B. Phillips and the editors of the Problems and Solutions section, Alberto Holly and Juan Dolado, for this useful service to the econometrics profession. I would also like to thank my colleague James M. Griffin for providing many empirical problems and data sets. I have also used three empirical data sets from Lott and Ray (1992). The reader is encouraged to apply these econometric techniques to their own data sets and to replicate the results of published articles. Some journals' authors provide data sets upon request or are readily available on the web. Other empirical examples are given in Lott and Ray (1992) and Berndt (1991). Finally, I would like to thank my students Wei Wen, Xiong Ming, Jang Weng and Kiseok Nam, who solved several of these exercises. Please report any errors, typos or suggestions to Badi H. Baltagi, Department of Economics, Texas A & M University, College Station, Texas 77843-4228. Telephone: 409 845 7380, Fax: 409 847 8757 or send EMAIL to Badi.econ@tamuedu.
