Exploring Climate Change through Science and in Society Mike Hulme, 2013-09-11 Mike Hulme has been studying climate change for over thirty years and is today one of the most distinctive and recognisable voices speaking internationally about climate change in the academy in public and in the media The argument that he has made powerfully over the last few years is that climate change has to be understood as much as an idea situated in different cultural contexts as it is as a physical phenomenon to

be studied through universal scientific practices Climate change at its core embraces both science and society both knowledge and culture Hulme s numerous academic and popular writings have explored what this perspective means for the different ways climate change is studied narrated argued over and acted upon Exploring Climate Change through Science and in Society gathers together for the first time a collection of his most popular prominent and controversial articles essays speeches interviews and reviews dating back to the late 1980s The 50 or so short items are grouped together in seven themes Science Researching Culture Policy Communicating Controversy Futures and within each theme are arranged chronologically to reveal changing ideas evidence and perspectives about climate change Each themed section is preceded with a brief introduction drawing out the main issues examined Three substantive unpublished new essays have been specially written for the book including one reflecting on the legacy of Climategate Taken as a collection these writings reveal the changes in scientific and public understandings of climate change since the late 1980s as refracted through the mind and expression of one leading academic and public commentator The collection shows the many different ways in which it is necessary to approach the idea of climate change to interpret and make sense of the divergent and discordant voices proclaiming it in the public sphere *Foundations of the Earth* H.H. Shugart,2014-07-08 Where were you when I laid the foundation of the earth God asks Job in the Whirlwind Speech but Job cannot reply This passage which some environmentalists and religious scholars treat as a green creation myth drives renowned ecologist H H Shugart s extraordinary investigation in which he uses verses from God s speech to Job to explore the planetary system animal domestication sea level rise evolution biodiversity weather phenomena and climate change Shugart calls attention to the rich resonance between the Earth s natural history and the workings of religious feeling the wisdom of biblical scripture and the arguments of Bible ethicists The divine questions that frame his study are quintessentially religious and the global changes humans have wrought on the Earth operate not only in the physical chemical and biological spheres but also in the spiritual realm Shugart offers a universal framework for recognizing and confronting the global challenges humans now face the relationship between human technology and large scale environmental degradation the effect of invasive species on the integrity of ecosystems the role of humans in generating wide biotic extinctions and the future of our oceans and tides

The Sky of Our Manufacture Jesse Oak Taylor, 2016-03-23 The smoke laden fog of London is one of the most vivid elements in English literature richly suggestive and blurring boundaries between nature and society in compelling ways In *The Sky of Our Manufacture* Jesse Oak Taylor uses the many depictions of the London fog in the late nineteenth and early twentieth century novel to explore the emergence of anthropogenic climate change In the process Taylor argues for the importance of fiction in understanding climatic shifts environmental pollution and ecological collapse The London fog earned the portmanteau smog in 1905 a significant recognition of what was arguably the first instance of a climatic phenomenon manufactured by modern industry Tracing the path to this awareness opens a critical vantage point on the Anthropocene a new geologic age in which the transformation of humanity into a climate changing force has not only altered our physical atmosphere but imbued it with new meanings The book examines enduringly popular works from the novels of Charles Dickens and George Eliot to *Dr Jekyll and Mr Hyde* *Dracula* and the Sherlock Holmes mysteries to works by Joseph Conrad and Virginia Woolf alongside newspaper cartoons scientific writings and meteorological technologies to reveal a fascinating relationship between our cultural climate and the sky overhead Under the Sign of Nature Studies in Ecocriticism
