Mathematics requires a large number of symbols to stand for abstract objects, such as variables, sets, and special constants, so the use of Greek letters was introduced to provide a collection of useful symbols to supplement the usual Roman letters. The pronunciations given are not the "correct" ones, but are common among scientists and mathematicians in English-speaking countries. The lower-case letters are most often used as variable symbols to represent angles and complex numbers, while the upper case letters commonly stand for sets and spaces.
