Greening Frankenstein Innovation For Sustainability:

Greening Frankenstein Kurt Seemann, Matthew Parnell, Dora Marinova, 2013-01-14 This book aims to publish a new message and novel ideas into the literature that links design technology and sustainability We are aiming through research and critical exposition to articulate new conceptual tools to describe and critique the made world The book targets policy professional and academic audiences concerned with sustainability culture and practice Through practical illustrations and our body of research we will offer alternative narratives for how we ought think about the meanings of the labels we use to define the made world our frankenstein and how our frankenstein is systemically part of us and part of ecology by design and by nature We will reveal to the reader how the technological world we have created is ontologically systemic and co evolves necessarily with our ecology while it also transforms our human identity we are part of technology technology is part of us and we are both part of ecology

Frankenstein Urbanism Federico Cugurullo, 2021-05-16 This book tells the story of visionary urban experiments shedding light on the theories that preceded their development and on the monsters that followed and might be the end of our cities The narrative is threefold and delves first into the eco city second the smart city and third the autonomous city intended as a place where existing smart technologies are evolving into artificial intelligences that are taking the management of the city out of the hands of humans The book empirically explores Masdar City in Abu Dhabi and Hong Kong to provide a critical analysis of eco and smart city experiments and their sustainability and it draws on numerous real life examples to illustrate the rise of urban artificial intelligences across different geographical spaces and scales Theoretically the book traverses philosophy urban studies and planning theory to explain the passage from eco and smart cities to the autonomous city and to reflect on the meaning and purpose of cities in a time when human and non biological intelligences are irreversibly colliding in the built environment Iconoclastic and prophetic Frankenstein Urbanism is both an examination of the evolution of urban experimentation through the lens of Mary Shelley s Frankenstein and a warning about an urbanism whose product resembles Frankenstein s monster a fragmented entity which escapes human control and human understanding Academics students and practitioners will find in this book the knowledge that is necessary to comprehend and engage with the many urban experiments that are now alive ready to leave the laboratory and enter our cities

The Making of Green Engineers Andrew Jamison, 2022-06-01 This book discusses the ways in which engineering educators are responding to the challenges that confront their profession On the one hand there is an overarching sustainability challenge the need for engineers to relate to the problems brought to light in the debates about environmental protection resource depletion and climate change There are also a range of societal challenges that are due to the permeation of science and technology into ever more areas of our societies and everyday lives and finally there are the intrinsic scientific and technological challenges stemming from the emergence of new fields of technosciences that mix science and technology in new combinations In the book the author discusses and exemplifies three contending response

strategies on the part of engineers and engineering educators a commercial strategy that links scientists and engineers into networks or systems of innovation an academic strategy that reasserts the traditional values of science and engineering and an integrative strategy that aims to combine scientific knowledge and engineering skills with cultural understanding and social responsibility by fostering what the author terms a hybrid imagination Professor Jamison combines scholarly analysis with personal reflections drawing on over forty years of experience as a humanist teaching science and engineering students about the broader social political and cultural contexts of their fields The book has been written as part of the Program of Research on Opportunities and Challenges in Engineering Education in Denmark PROCEED funded by the Danish Strategic Research Council for which Professor Jamison has served as coordinator

The Urbanization of Green Internationalism

Yonn Dierwechter, 2018-09-25 The recent rise of cities in global environmental politics has stimulated remarkable debates about sustainable urban development and the geopolitics of a changing world order no longer defined by tightly bordered national regimes This book explores this major theme by drawing on approaches that document the diverse histories and emergent geographies of internationalism It is no longer possible the book argues to analyze the global politics of the environment without considering its various urbanization s wherein multiple actors are reforming reassembling and adapting to nascent threats posed by global ecological decay The ongoing imposition and abrasion of different world orders

Westphalian and post Westphalian further suggests we need a wider frame to capture new kinds of urbanized spaces and global green politics The book will appeal to students scholars and practitioners interested in global sustainability urban development planning politics and international affairs Case studies and grounded examples of green internationalism in urban action ultimately explore how select city regions like Cape Town Los Angeles and Melbourne are trying to negotiate and actually work through this postulated dilemma

decisions This heightened awareness of the natural environment has been reflected in the innovative and environmentally conscious products offered to consumers in recent years Firms develop sustainable programs with the purpose of greening their own products and process while reducing the impact of their activities In order to eliminate the problems of environmental pollution the concepts of environmental management such as green management green marketing green production and green innovation etc are now being pursued Apart from innovation the concerns of enterprises regarding environment has become main factor for achieving competitive advantage in the competitive business environment Organizations tend to rely on developing innovative products to stay competitive

Profits and Sustainability Geoffrey Jones,2018-01-26 Are profits and sustainability compatible This book brings unique perspectives to this key debate by exploring the history of green entrepreneurship since the nineteenth century and its spread globally in industries including renewable energy organic food natural beauty ecotourism recycling architecture and finance The book uses the lens of the extraordinary and often eccentric men and women who defied convention and imagined that business could help save the planet rather than consume it The social and religious beliefs that drove many of these individuals are explored as the book looks at how they overcame huge obstacles to execute their strategies The green entrepreneurs seen here are shown to have created new markets and industries and driven innovations in sustainable practices even at times when most consumers and governments marginalized the entire subject The struggles of early pioneers appear to have been rewarded by the growth of environmental awareness among consumers business leaders and others in recent years but the Earth s environmental health continues to deteriorate If profits and sustainability have proved challenging to reconcile the book argues that one reason was how they were both defined
