Transforming Libraries, Building Communities
 Julie Biando Edwards, Melissa S. Robinson, Kelley Rae Unger, 2013-05-30 This book is for those moving their library beyond places to find information Written by practicing public librarians and an academic librarian with an interest in public libraries the book focuses on how public libraries can become more community centered and by doing so how they can transform both themselves and their communities The authors argue that focusing on building community through innovative and responsive services and programs will be the best way for the public library to reposition itself in the years to come Repositioning the library acknowledges that information is in abundance in contemporary life And while accessing information will always be at the heart of what libraries do it isn't the only thing they do It may not be in the future even the most important thing that they do This book encourages librarians to admit that our role has evolved and to reframe the discussion so that it is about what we actually can do play an essential role in meeting community needs and building strong and vibrant local communities The authors argue that repositioning libraries as community centered institutions is a responsibility Libraries bring people together They create community and they also create mini communities everything from book groups to writing circles to new citizen groups to linguistic or ethnic communities reflected in programming and in collections These mini communities help provide fellowship and foster relationships amongst the group members but also because they exist in the public place that is the library help the larger community recognize and learn about the mini communities that create the larger community This is the work of libraries The book is divided into three parts which include explorations into the importance of the community centered library practical advice on making your library more community centered and a showcase of community centered library programs services and initiatives across the United States A special focus of the book is on how community development literature and practice can inform librarianship with an emphasis on Asset Based Community Development principles The book looks at how community centered libraries build individual and community assets and how in doing so they serve as essential community anchors and institutions

Transformation Of Knowledge In The Digital Age Environment Through Library
 Dr. D. D. LAL, Ms. Yogita Talwar, Prof. Manoj Kumar Sinha, 2022-04-28 The proposed book emphasizes importance for a library to be flexible to changing needs and to adopt new technologies rapidly If a library of today wants to achieve success it must offer high quality service the best possible satisfaction of requirements and exhibit great flexibility in its activity In order to achieve all these goals it is necessary to attract specialists of a library to solving common problems Today people get their information online often filtered through for profit platforms If a book isn't online it's as if it doesn't exist Yet much of modern knowledge still exists only on the

printed page stored in libraries Libraries haven't met this digital demand stymied by costs e-book restrictions policy risks and missing infrastructure We now have the technology and legal frameworks to transform our library system The Internet Archive working with library partners proposes bringing millions of books online through purchase or digitization starting with the books most widely held and used in libraries and classrooms With the emergence of new technologies the traditional library acting as a medium for sharing information needs an integral refinement in its processes This transformation will bring in efficiency and minimize human error in the processes with the help of smart gates material location finder and smart check out booth to automate the processes of controlling access locating items as well as the issuing returning of materials However the changeover to a smart library system might face several challenges like for instance the cost of implementing numerous high frequency RFID readers at prime locations in the library Another crucial challenge of this system will be the limitation of the equipment to achieve a more performing system Highly sophisticated equipment will be required which will largely affect the cost Smart library focuses on use of technology in a library and is designed to be very collaborative learning environment where participants are encouraged to contribute ideas and information Smart library improves traditional and non traditional library services improves users library experience and enhances opportunities for students learning Libraries are facing increased expectations from users and challenge of developing technologies including Web 2.0 e-books digitations and a problem of archiving digital content Web based technology provides users and information professionals with powerful and flexible tools for information dissemination

The Translational Design of Universities, 2019-08-12 Whilst schools are transforming their physical and virtual environments at a relatively glacial pace in most countries across the globe universities are under extreme pressure to adapt to the rapid emergence of the virtual campus Competition for students by online course providers is resulting in a rapidly emerging understanding of what the nature of the traditional campus will look like in the 21st century The blended virtual and physical technology enabled hybrid learning environments now integrate the face to face and online virtual experience synchronously and asynchronously Local branch campuses are emerging in city and town centres and international branch campuses are growing at a rapid rate There is increasing pressure at various levels i.e. the city the urban and the campus to create formal and informal learning spaces as well as re-purposing the library and social or third spaces Many new hybrid campus developments are not based on any form of rigorous scholarly evidence The risk is that many of these projects may fail In taking an evidence based approach this book seeks to align with the model of translational research from medical practice using a modified translational design approach The majority of the chapter material comes from the scholarly work of doctoral graduates and their dissertations This book is the second in a series on the evidence based translational design of educational institutions with the first volume focussing on schools This volume on Higher Education covers the city to the classroom and those elements in between It also explores what the future might look like as judgements are made about what works in campus planning and design in our rapidly
