**Mathematical Thought and Its Objects** Charles Parsons, 2008 Charles Parsons examines the notion of object with the aim to navigate between nominalism denying that distinctively mathematical objects exist and forms of Platonism that postulate a transcendent realm of such objects He introduces the central mathematical notion of structure and defends a version of the structuralist view of mathematical objects according to which their existence is relative to a structure and they have no more of a nature than that confers on them Parsons also analyzes the concept of intuition and presents a conception of it distantly inspired by that of Kant which describes a basic kind of access to abstract objects and an element of a first conception of the infinite

Mathematical Knowledge, Objects and Applications Carl Posy, Yemima Ben-Menahem, 2023-05-05 This book provides a survey of a number of the major issues in the philosophy of mathematics such as ontological questions regarding the nature of mathematical objects epistemic questions about the acquisition of mathematical knowledge and the intriguing riddle of the applicability of mathematics to the physical world Some of these issues go back to the nascent years of mathematics itself others are just beginning to draw the attention of scholars In addressing these questions some of the papers in this volume wrestle with them directly while others use the writings of philosophers such as Hume and Wittgenstein to approach their problems by way of interpretation and critique The contributors include prominent philosophers of science and mathematics as well as promising younger scholars The volume seeks to share the concerns of philosophers of mathematics with a wider audience and will be of interest to historians mathematicians and philosophers alike

**Aristotle on the Essence of Human Thought** Klaus Corcilus, Andrea

Falcon, Robert Roreitner, 2024-12-18 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read on Oxford Academic and offered as a free PDF download from OUP and selected open access locations Aristotle on the Essence of Human Thought offers a novel reading of one of the most difficult stretches of text in the whole Aristotelian corpus De anima III 4 8 showing that this stretch of text contains a unitary and coherent account of the essence of the human capacity for thought Aristotle gives this capacity the name nous Nous is the first principle and ultimate explanans of human thinking The volume argues for four key claims The first claim is rationalism humans come to know the world around us via two fundamentally different cognitive powers nous and perception They are fundamentally different cognitive powers because the nature of their corresponding objects is fundamentally different The second claim is essentialism the human capacity for thought is defined as a capacity for directly grasping essences of everything there is It is this very capacity that Aristotle shows to be the principle of all human thinking According to the third claim separatism human nous is a very special kind of power It is unmixed with the body has no dedicated bodily organ and is separable from the body As a result it cannot be assimilated to any of the other parts of the soul While nous belongs to our essence as human beings it is not part of the natural world Finally the volume argues for embeddedness in the cognitive soul human nous is always embedded in a cognitive soul which among other things means that the distinctive activity of human nous thinking can only take place in the context of a larger set of activities which are common to the body and the soul

Aristotle's De Anima Ronald Polansky, 2007-09-24 Aristotle's De Anima is the first systematic philosophical account of the soul which serves to explain the functioning of all mortal living things In his commentary Ronald Polansky argues that the work is far more structured and systematic than previously supposed He contends that Aristotle seeks a comprehensive understanding of the soul and its faculties By closely tracing the unfolding of the many layered argumentation and the way Aristotle fits his inquiry meticulously within his scheme of the sciences Polansky answers questions relating to the general definition of soul and the treatment of each of the soul's principal capacities nutrition sense perception phantasia intellect and locomotion The commentary sheds light on every section of the De Anima and the work as a unit It offers a challenge to earlier and current interpretations of the relevance and meaning of Aristotle's highly influential treatise The Philosophy of Hilary Putnam Randall E. Auxier, Douglas R. Anderson, Lewis Edwin Hahn, 2015-05-18 Hilary Putnam who turned 88 in 2014 is one of the world's greatest living philosophers He currently holds the position of Cogan University Professor Emeritus of Harvard He has been called one of the 20th century's true philosophic giants by Malcolm Thorndike Nicholson in Prospect magazine in 2013 He has been very influential in several different areas of philosophy philosophy of mathematics philosophy of language philosophy of mind and philosophy of science This volume in the prestigious Library of Living Philosophers series contains 26 chapters original to this work each written by a well known philosopher including the late Richard Rorty and the late Michael Dummett The volume also includes Putnam's reply to each of the 26 critical and

descriptive essays which cover the broad range of Putnam's thought. They are organized thematically into the following parts: Philosophy and Mathematics; Logic and Language; Knowing and Being; Philosophy of Practice and Elements of Pragmatism. Synthetic Philosophy of Contemporary Mathematics Fernando Zalamea, 2012-09-01 A panoramic survey of the vast spectrum of modern and contemporary mathematics and the new philosophical possibilities they suggest. A panoramic survey of the vast spectrum of modern and contemporary mathematics and the new philosophical possibilities they suggest. This book gives the inquisitive non-specialist an insight into the conceptual transformations and intellectual orientations of modern and contemporary mathematics. The predominant analytic approach with its focus on the formal, the elementary and the foundational has effectively divorced philosophy from the real practice of mathematics and the profound conceptual shifts in the discipline over the last century. The first part discusses the specificity of modern mathematics from 1830 to 1950 and contemporary mathematics from 1950 to the present, and reviews the failure of mainstream philosophy of mathematics to address this specificity. Building on the work of the few exceptional thinkers to have engaged with the real mathematics of their era, including Lautman, Deleuze, Badiou, de Lorenzo and Chatelet, Zalamea challenges philosophy's self-imposed ignorance of the making of mathematics. In the second part, thirteen detailed case studies examine the greatest creators in the field, mapping the central advances accomplished in mathematics over the last half century, exploring in vivid detail the characteristic creative gestures of modern master Grothendieck and contemporary creators including Lawvere, Shelah, Connes and Freyd. Drawing on these concrete examples and oriented by a unique philosophical constellation, Peirce, Lautman, Merleau-Ponty, in the third part, Zalamea sets out the program for a sophisticated new epistemology, one that will avail itself of the powerful conceptual instruments forged by the mathematical mind but which have until now remained largely neglected by philosophers.

*Formalism and Beyond* Godehard Link, 2014-10-09 The essays collected in this volume focus on the role of formalist aspects in mathematical theorizing and practice, examining issues such as infinity, finiteness and proof procedures as well as central historical figures in the field, including Frege, Russell, Hilbert and Wittgenstein. Using modern logical-philosophical tools and systematic conceptual and logical analyses, the volume provides a thorough up-to-date account of the subject.
