Modern Thermodynamics for Chemists and Biochemists Dennis Sherwood, Paul Dalby, 2018-05-11 Thermodynamics is fundamental to university and college curricula in chemistry physics engineering and many life sciences around the world It is also notoriously difficult for students to understand learn and apply What makes this book different and special is the clarity of the text The writing style is fluid natural and lucid and everything is explained in a logical and transparent manner Thermodynamics is a deep and important branch of science and this book does not make it easy But it does make it intelligible This book introduces a new Fourth Law of Thermodynamics based on the notion of Gibbs

free energy which underpins almost every application of thermodynamics and which the authors claim is worthy of recognition as a law. The last four chapters bring thermodynamics into the twenty first century dealing with bioenergetics how living systems capture and use free energy macromolecule assembly how proteins fold and macromolecular aggregation how for example virus capsids assemble. This is of great current relevance to students of biochemistry biochemical engineering and pharmacy and is covered in very few other texts on thermodynamics. The book also contains many novel and effective examples such as the explanation of why friction is irreversible the proof of the depression of the freezing point and the explanation of the biochemical standard state.

Contemporary Enzyme Kinetics and Mechanism, 2009-10-24

Kinetic studies of enzyme action provide powerful insights into the underlying mechanisms of catalysis and regulation. These approaches are equally useful in examining the action of newly discovered enzymes and therapeutic agents. *Contemporary Enzyme Kinetics and Mechanism* Second Edition presents key articles from Volumes 63 64 87 249 308 and 354 of *Methods in Enzymology*. The chapters describe the most essential and widely applied strategies. A set of exercises and problems is included to facilitate mastery of these topics. The book will aid the reader to design execute and analyze kinetic experiments on enzymes. Its emphasis on enzyme inhibition will also make it attractive to pharmacologists and pharmaceutical chemists interested in rational drug design. Of the seventeen chapters presented in this new edition ten did not previously appear in the first edition. Transient kinetic approaches to enzyme mechanisms. Designing initial rate enzyme assay. Deriving initial velocity and isotope exchange rate equations. Plotting and statistical methods for analyzing rate data. Cooperativity in enzyme function. Reversible enzyme inhibitors as mechanistic probes. Transition state and multisubstrate inhibitors. Affinity labeling to probe enzyme structure and function. Mechanism based enzyme inactivators. Isotope exchange methods for elucidating enzymatic catalysis. Kinetic isotope effects in enzyme catalysis. Site directed mutagenesis in studies of enzyme catalysis.

Designing the Molecular World Philip Ball, 2020-10-06

Some of the most exciting scientific developments in recent years have come not from theoretical physicists astronomers or molecular biologists but instead from the chemistry lab. Chemists have created superconducting ceramics for brain scanners designed liquid crystal flat screens for televisions and watch displays and made fabrics that change color while you wear them. They have fashioned metals from plastics drugs from crude oil and have pinpointed the chemical pollutants affecting our atmosphere and are now searching for remedies for the imperiled planet. Philip Ball an editor for the prestigious magazine *Nature* lets the lay reader into the world of modern chemistry. Here for example chemists find new uses for the improbable buckminsterfullerene molecules 60 atom carbon soccerballs dubbed buckyballs which seem to have applications for everything from lubrication to medicine to electronics. The book is not intended as an introduction to chemistry but as an accessible survey of recent developments throughout many of the major fields allied with chemistry from research in traditional areas such as crystallography and spectroscopy to entirely new fields of study such as molecular electronics artificial enzymes and smart polymer gels. Ball's grand tour along the

leading edge of scientific discovery will appeal to all curious readers with or without any scientific training to chemistry students looking for future careers and to practicing chemical researchers looking for information on other specialties within their discipline
