Askew,2015-02-26 Mathematics often gets a bad press Describing someone as calculating or rational is hardly as flattering as being labelled artistic or creative and mathematicians in movies or novels are often portrayed as social misfits who rarely get the guy or girl No wonder some folks say oh I don t care for mathematics I was never any good at it with a wistful sense of pride Yet professional mathematicians talk of the subject differently They look for elegant solutions to problems revel in playing around with mathematical ideas and talk of the creative nature of mathematics As the Russian mathematician Sophia Kovalevskaya said It is impossible to be a mathematician without being a poet in soul So why is there such a gap between the

views of everyday folks and professional mathematicians Part of the problem lies in how most of us were taught mathematics in school The mathematics served up there is presented as a series of de contextualised abstract ideas wrested from the human struggles and interactions that gave birth to the ideas Through looking at some of the history of mathematics psychological studies into how we come to know mathematics and key ideas in mathematics itself the intent of this book is if not to make the reader fall in love with mathematics then at least to come to understand its nature a little better and perhaps care a little more for it In short this book explores the human side of maths , Blueprints Marcus du

Sautoy,2025-09-09 A stunning book a thrilling read Peter Frankopan that reveals how creative people can harness the profound and productive relationship between mathematics and the arts When Shakespeare has the Three Witches cast Macbeth s lot he uses something very weird to do it not simply eye of newt and toe of frog but the number seven And when Hamlet claims To be or not to be that is the question Shakespeare reaches for eleven For Shakespeare prime numbers were magical And he is not alone As Marcus du Sautoy showcases in Blueprints creativity is inseparable from mathematics The designs of Le Corbusier and Leonardo the music of Glass Bach and Debussy the wild visions of Dali the choreography of Laban the animation of Pixar all are shot through with mathematics from primes and fractals to the weirder worlds of Hamiltonian cycles and hyperbolic geometry And Du Sautoy argues that the relationship runs both ways Just as mathematics inspires new art the artistic mindset is a necessity for discovering new mathematics Blueprints will expand your mind but more importantly it shows how to ignite your imagination Anyone who wants to create needs this book *Mini*

Multimodal Stylistics of the Novel Nina Nørgaard,2018-10-08 This book advocates for a new analytical framework that extends our understanding of multimodal meaning making in the novel Integrating theoretical traditions from stylistics and the influential social semiotic approach to multimodal communication developed by Kress and van Leeuwen N rgaard applies this method of analysis in order to build on existing stylistic practices that look at linguistic features in the novel to encompass other semiotic resources found in the form such as typography layout images paper and book cover design The

volume grounds the discussion with supporting examples from novels that feature experimentation with multiple semiotic resources as well as more traditional novels furthering the argument that all novels are inherently multimodal. Offering new insights and tools for unpacking multimodal meaning making in this critical literary genre, this volume is an indispensable resource for graduate students and researchers in multimodality, stylistics and literary studies.

Forty Pence Each or Two for a Pound Danielle Bartram, 2017-11-13

In *Forty Pence Each or Two for a Pound: Making Maths Memorable, Accessible and Relevant*, Danielle Bartram shares a wealth of practical resources and ideas to help teachers develop a whole school commitment to and enthusiasm for improving numeracy. How many times have you heard someone say they can't do maths? This attitude and acceptance of it appears to be endemic, but being bad at maths or excusing innumeracy as maths phobia can no longer be tolerated. Danielle Bartram of Miss B's Resources fame has made it her mission to remedy this issue and believes that learners should have a basic concept of number and problem solving in order to stop them being ripped off by companies when purchasing items, insurance or moving energy suppliers later on in life. For this reason, she has specifically designed *Forty Pence Each or Two for a Pound* to give the teaching and learning of numeracy a firm foundation in everyday contextual settings so that students can transfer the logical and functioning skills inherent in mathematical understanding to real world contexts. With the new Ofsted criteria focus on numeracy, all teachers will want to develop their maths teaching practice. *Forty Pence Each or Two for a Pound* contains plenty of ideas to help teachers of all subject specialisms to do just that and tackles students' maths phobia head-on by providing an invaluable collection of 31 ready-to-use activities and resources to improve their enthusiasm for and confidence in the applied use of maths. Danielle has achieved this by shifting away from a prescribed list of maths teaching techniques and instead presents a treasure trove of exciting, lesson-ready ideas held together by six numeracy links: number, functional skills, graphs and statistics, problem solving, shapes and measures, and formulae and equations that can be embedded across the full curriculum. The 31 resources are tagged with their relevant numeracy links to indicate the mathematical territory covered, e.g. graphs and statistics, and are also divided into six categories: literacy, exploration, engagement, classroom management, marking and reflection, and organisation and presentation for ease of identification. While flicking through the book, Danielle complements each activity with useful mathematical pointers such as the language to be used and the numerical concepts that students often struggle with or have misconceptions about, and has made all of the resources available as PDF downloads from her Miss B's Resources website via a specific link provided in the book. Beyond the more practical provision of strategies and resources, *Forty Pence Each or Two for a Pound* also offers expert guidance on the shaping of numeracy coordination across the school and presents example audit grids to serve as an outline of how students' progress with each numeracy link can be monitored. Suitable for numeracy coordinators and teachers of all subjects in both primary and secondary settings who want to embed into their lessons the numeracy skills that their students will need in everyday life.
