Improving Fuel Cycle Design and Safety Characteristics of a Gas Cooled Fast Reactor Willem Frederik Geert van Rooijen, 2006 The Generation IV Forum is an international nuclear energy research initiative aimed at developing the fourth generation of nuclear reactors envisaged to enter service halfway the 21st century One of the Generation IV reactor systems is the Gas Cooled Fast Reactor GCFR the subject of study in this thesis The Generation IV reactor concepts should improve all aspects of nuclear power generation Within Generation IV the GCFR concept specifically targets sustainability of nuclear power generation The Gas Cooled Fast Reactor core power density is high in comparison to other gas cooled reactor concepts Like all nuclear reactors the GCFR produces decay heat after shut

down which has to be transported out of the reactor under all circumstances The layout of the primary system therefore focuses on using natural convection Decay Heat Removal DHR where possible with a large coolant fraction in the core to reduce friction losses

Engineering Materials 2 Michael F. Ashby, D.R.H. Jones, 2014-06-28 Provides a thorough explanation of the basic properties of materials of how these can be controlled by processing of how materials are formed joined and finished and of the chain of reasoning that leads to a successful choice of material for a particular application The materials covered are grouped into four classes metals ceramics polymers and composites Each class is studied in turn identifying the families of materials in the class the microstructural features the processes or treatments used to obtain a particular structure and their design applications The text is supplemented by practical case studies and example problems with answers and a valuable programmed learning course on phase diagrams

Engineering Materials Volume 2 David R.H. Jones, Michael F. Ashby, 2013-10-22 Materials are evolving faster today than at any time in history As a consequence the engineer must be more aware of materials and their potential than ever before In comparing the properties of competing materials with precision involves an understanding of the basic properties of materials how they are controlled by processing formed joined and finished and of the chain of reasoning that leads to a successful choice This book will provide the reader with this understanding Materials are grouped into four classes Metals Ceramics Polymers and Composites and each are examined in turn The chapters are arranged in groups with a group of chapters to describe each of the four classes of materials Each group first of all introduces the major families of materials that go to make up each materials class The main microstructural features of the class are then outlined and the reader is shown how to process or treat them to get the structures properties that are wanted Each group of chapters is illustrated by Case Studies designed to help the reader understand the basic material This book has been written as a second level course for engineering students It provides a concise introduction to the microstructures and processing of materials and shows how these are related to the properties required in engineering design Unique approach to the subject World renowned author team Improved layout and format
