Materials for Automobile Bodies, Second Edition Geoff Davies, 2012 *Materials for Automobile Bodies* Geoffrey Davies, 2012-04-04 The selection of automobile body materials is fundamental to the choice of fabrication method and the characteristics and performance of the final vehicle or component. The factors behind these choices comprise some of the key technological and design issues facing automotive engineers today. *Materials for Automobile Bodies* brings together a wealth of information on automotive materials and material technologies to provide designers and vehicle body engineers with both a solid grounding and a quick reference to inform their material choices. Coverage includes materials processing, formability, welding and joining, anti-corrosion technologies, plus a comprehensive consideration of the implications of materials selection on these processes. Dealing with the whole assembly process from raw material to production right through to recycling at the end of a vehicle's life, this book is the essential resource for practising engineers, designers, analysts, and students involved in the design and specification of motor vehicle bodies and components. Up-to-date detailed information on contemporary autobody materials, incorporating the explanation often lacking in other data-focused resources. Includes informative and insightful case studies on the materials and processing choices of major OEMs including Honda, BMW, and Audi. Now with more on geographical supply and usage trends, environmental concerns, and end-of-life disassembly considerations and how these affect selection choices.

Nondestructive Testing and Evaluation of Fiber-Reinforced Composite Structures Shuncong Zhong, Walter Nsengiyumva, 2022-04-01 This book presents a detailed description of the most common nondestructive testing (NDT) techniques used for the testing and evaluation of fiber-reinforced composite structures during manufacturing and/or in service stages. In order to facilitate the understanding and the utility of the different NDT techniques presented, the book first provides some information regarding the defects and material degradation mechanisms observed in fiber-reinforced composite structures, as well as their general description and most probable causes. It is written based on the extensive scientific research and engineering backgrounds of the authors in the NDT and structural health monitoring (SHM) of structural systems from various areas, including electrical, mechanical, materials, civil, and biomedical engineering. Pursuing a rigorous approach, the book establishes a fundamental framework for the NDT of fiber-reinforced composite structures while emphasizing on the importance of technique's spatial resolution, integrated systems analysis, and the significance of the influence stemming from the applicability of the NDT and the physical parameters of the test structures in the selection and utilization of adequate NDT techniques. The book is intended for students who are interested in the NDT of fiber-reinforced composite structures, researchers investigating the applicability of different NDT techniques to the inspections of structural systems, and NDT researchers and engineers working on the optimization of NDT systems for specific applications involving the use of fiber-reinforced composite structures.
