Lee Swanson, Karen R. Harris, Steve Graham, 2014-08-13 This comprehensive handbook reviews the major theoretical methodological and instructional advances that have occurred in the field of learning disabilities With contributions from leading researchers the volume synthesizes a vast body of knowledge on the nature of learning disabilities their relationship to basic psychological and brain processes and how students with these difficulties can best be identified and treated Findings are reviewed on ways to support student performance in specific skill areas including language arts math science and social studies as well as general principles of effective instruction that cut across academic domains Authoritative and up to date the book also examines the concepts and methods that guide learning disability research and identifies promising directions for future investigation **El-Hi Textbooks and Serials in Print** ,1985 **Children's Books in Print** ,1993 **100 Top Picks for Homeschool Curriculum** Cathy Duffy, 2005 A critical volume for the homeschooling community that helps parents make informed choices regarding learning styles and curriculum *Novel decision-making method based on bipolar neutrosophic information* Jianming Zhan, Muhammad Akram, Muzzamal Sitara, In 1998 Smarandache originally considered the concept of neutrosophic set from philosophical point of view The notion of a single valued neutrosophic set is a subclass of the neutrosophic set from a scientific and engineering point of view and an extension of intuitionistic fuzzy sets A bipolar single valued neutrosophic set is an extension of a bipolar fuzzy set which provides us an additional possibility to represent uncertainty imprecise incomplete and inconsistent information existing in real situations In this research article we apply the concept of bipolar single valued neutrosophic sets to graph structures and present a novel framework for handling bipolar neutrosophic information by combining bipolar neutrosophic sets with graph structures Several basic notions concerning bipolar single valued neutrosophic graph

structures are introduced and some related properties are investigated We also consider the applications of bipolar single valued neutrosophic graph structures in decision making In particular efficient algorithms are developed to solve decision making problems regarding recognition of each country s participation in its conspicuous relationships detection of psychological improvement of patients in a mental hospital and uncovering the undercover reasons for global terrorism

Neural Network Modeling and Identification of Dynamical Systems Yury Tiumentsev,Mikhail Egorchev,2019-05-17

Neural Network Modeling and Identification of Dynamical Systems presents a new approach on how to obtain the adaptive neural network models for complex systems that are typically found in real world applications The book introduces the theoretical knowledge available for the modeled system into the purely empirical black box model thereby converting the model to the gray box category This approach significantly reduces the dimension of the resulting model and the required size of the training set This book offers solutions for identifying controlled dynamical systems as well as identifying characteristics of such systems in particular the aerodynamic characteristics of aircraft Covers both types of dynamic neural networks black box and gray box including their structure synthesis and training Offers application examples of dynamic neural network technologies primarily related to aircraft Provides an overview of recent achievements and future needs in this area

Methods Gábor Braun,Alejandro Carderera,Cyrille W. Combettes,Hamed Hassani,Amin Karbasi,Aryan Mokhtari,Sebastian Pokutta,2025-09-30 Conditional Gradient Methods From Core Principles to AI Applications offers a definitive and modern treatment of one of the most elegant and versatile algorithmic families in optimization the Frank Wolfe method and its many variants Originally proposed in the 1950s these projection free techniques have seen a powerful resurgence now playing a central role in machine learning signal processing and large scale data science This comprehensive monograph unites deep theoretical insights with practical considerations guiding readers through the foundations of constrained optimization and into cutting edge territory including stochastic online and distributed settings With a clear narrative rigorous proofs and illuminating illustrations the book demystifies adaptive variants away steps and the nuances of dealing with structured convex sets Implementations of most of the algorithms in the book are available on a supplementary website or in the FrankWolfe.jl Julia package This book is intended for optimization researchers and theorists machine learning methodologists and algorithm designers Graduate students in those areas will also find it of interest *Algorithms - ESA '95* Paul Spirakis,1995-09-13 This book constitutes the proceedings of the Third Annual European Symposium on Algorithms ESA '95 held in Corfu Greece in September 1995 The volume presents 42 full revised papers selected during a careful refereeing process from a total of 119 submissions in addition there is a prominent keynote address This year the scope has been further expanded to new areas of computational endeavour in science the book covers many aspects of algorithms research and application ranging from combinatorial mathematics to hardware design *Introduction to Modern Modelling Methods*
