Opening the Research Text Elizabeth de Freitas,Kathleen Nolan,2007-12-19 In this chapter we interrogate the debate between mathematicians and mathematics educators This debate is widely recognized in the United States for instance where the term math wars is often used in reference to the heated disagreements between mathematicians and mathematics edu tors Such recognition might suggest that this topic itself has relevance both for the academy and for educational policy pertaining to mathematics edu tion We propose to locate this debate unavoidably whenever and wherever mathematics education is written Our aim is to show how the debate itself gives rise to the inscription mathematics education Indeed we contend that mathematics education cannot be defined outside of or prior to the debate for it is precisely through the debate that it is constituted as a domain for 1 deliberation The debate is more primordial than any epist m or domain implied by it In other words we argue that mathematics and mathematics education do not exist epistemically prior to the debate In order to engage this issue we consider a transcription of a panel debate 2 between mathematicians and mathematics educators held in Brazil in 1998 There is at least a double meaning for the word debate it may mean a meeting having a beginning and an end well localized in space and time and with a specific proposal or focus as in the following sentence I am going to see on TV the debate between Bush and Blair tomorrow at 5 pm

Presenting Children to Maths: Stronger Character for Better Learning David Shattock,2023-09-22 Mathematics is not a universally popular subject neither within nor outside of school There are those who love it but many do not and it is not uncommon for people to take a perverse pride in being bad at it This book argues that while much needed improvements to mathematics teaching are necessary to address such issues they are insufficient without also imbuing children with the character required to learn it effectively Teachers of mathematics are responsible not only for applying skilful pedagogy but also for developing a productive learning culture within the mathematics classroom We need to consider the emotional and social impact on children of teachers own attitudes and beliefs about mathematics and how children should be taught it Sometimes provocative and irreverent but always stimulating and lucid Presenting Children to Maths is an original and profound discussion about how students ability and success in mathematics depends largely on how their disposition and will are shaped towards learning it
