**Mind the Gap!** Michael William Fortuin, 2015      **International Perspectives on Teaching and Learning for Mathematical Literacy**, 2024-10-02 Mathematics plays an important role in today's world and is used in daily life more than is often appreciated. Mathematical literacy denotes the competence to deal with the mathematical issues of life in modern society. The underlying purpose of this book is to support the development of rich understandings and practices of how an education for mathematical literacy can be realised. The collected works emerging from several educational systems offer a fresh perspective on mathematical literacy and the chapters include practical examples that teachers, pre-service teachers and teacher educators might adapt to their own needs.      *Mind the gap: To what extent do social, economic, and psychological factors explain underperformance in achievements assessments? Identifying interventions to narrow the gap* Marcos Cupani, Ana E. Azpilicueta, Jose Juan Gongora, Sebastian Urquijo, 2023-10-06      Annual Report South Africa. Department of Basic Education, 2016      Becoming a Mathematician Leigh N Wood, Peter Petocz, Anna Reid, 2012-02-13 This book considers the views of participants in the process of becoming a mathematician that is the students and the graduates. This book investigates the people who carry out mathematics rather than the topics of mathematics. Learning is about change in a person, the development of an identity and ways of interacting with the world. It investigates more generally the development of mathematical scientists for a variety of workplaces and includes the experiences of those who were not successful in the transition to the workplace as mathematicians. The research presented is based on interviews, observations and surveys of students and graduates as they are finding their identity as a mathematician. The book contains material from the research carried out in South Africa, Northern Ireland, Canada and Brunei as well as Australia.      Mathematics Curriculum Topic Study Page Keeley, Cheryl M. Rose, 2006-04-06 This book addresses the needs of teachers at every level in their teaching careers as well as those who support and work with teachers. The processes can be used individually to guide professional learning and teaching or within almost any professional development structure for facilitating group learning. Katherine E Stiles, Senior Program Associate, WestEd. This resource supports continual professional growth of both content and pedagogical knowledge and will help teachers focus on the appropriate research. What a time saver this is! Rhonda Naylor, National Board Certified Mathematics Teacher, Campus Middle School, Englewood, CO. Attain the tools to plan and incorporate standards-based instruction that positively impacts student achievement. Becoming an accomplished mathematics teacher requires not only a thorough understanding of content but also a familiarity with mathematics standards and research. However, a strategy for translating standards and research into instructional practice has been lacking since the advent of standards-based education reform. Mathematics Curriculum Topic Study provides a systematic professional development strategy that links mathematics standards and research to curriculum instruction and assessment. Developed by authors Page Keeley and Cheryl M. Rose of the Maine Mathematics and Science Alliance, the NSF-funded Curriculum Topic Study CTS.

How Words Help Us Think Nancy Salay, 2025-02-06 A capacity to act for reasons is a key indicator of intelligence A leaf floats this way and that as the wind currents shift a drone moves up or down with the movements of its controller but a cognitive agent decides to walk to the store to get some food This deliberative capacity to think through hypothetical situations to choose between the grocery store or the restaurant requires representational intentionality the ability to think about real and possible situations in the world According to the mainstream zeitgeist in the cognitive sciences this capacity exhaustively reduces to lower level processes and as a consequence cognitive research has been driven increasingly inwards and downwards to focus on activity at the neural and molecular levels Here Nancy Salay argues that this move is deeply misguided After revealing the central problems with this internalist idea Salay puts forward an externalist paradigm of intentionality supported by recent empirical work in neuroscience computer science philosophy animal cognition and developmental psychology Drawing all of these insights together she provides a unified framework in which to situate externalist views of intentionality making progress towards a viable theory of cognition This is a comprehensive theoretical guide and a valuable empirical resource for those who view cognition through an extended and enactive lens
