Mathematics Education and Subjectivity Tony Brown,2011-07-09 This book is centrally concerned with how mathematics education is represented and how we understand mathematical teaching and learning with view to changing them It considers teachers students and researchers It explores their mathematical thinking and the concepts that this thought produces But also how these concepts acquire cultural layers that mediate our apprehension The book examines some of the linguistic and socio cultural filters that influence mathematical understanding But above all it introduces some contemporary theories of human subjectivity in which subjectivity is seen primarily as consequential to rather than productive of our attempts to represent or categorise the world in which we live That is our sense of who we are results from our attempts to see ourselves against the various versions of the world that we encounter Such theories trouble the very notion of mathematical concepts as apprehended by humans And in foregrounding this concern with subjectivity the book considers mathematics rather differently to styles more familiar in many instances of mathematics education research The book proposes that mathematics can provoke us to think differently about our world and as a result enable our transformative capacities Such an orientation may disturb our understanding of what mathematics is how it exists in an objective sense insofar as mathematical objects can be derived from social filters being applied to the world but also serve as filters on the world capable of producing new social entities **Rethinking Disability and Mathematics** Rachel Lambert,2024-04-15

Every child has a right to make sense of math and to use math to make sense of their worlds. Despite their gifts, students with disabilities are often viewed from a deficit standpoint in mathematics classrooms. These students are often conceptualized as needing to be fixed or remediated. Rethinking Disability and Mathematics argues that mathematics should be a transformative space for these students, a place where they can discover their power and potential and be appreciated for their many strengths. Author Rachel Lambert introduces Universal Design for Learning for Math (UDL Math), a way to design math classrooms that empowers disabled and neurodiverse students to engage in mathematics in ways that lead to meaningful and joyful math learning. The book showcases how UDL Math can open up mathematics classrooms so that they provide access to meaningful understanding and an identity as a math learner to a wider range of students. Weaved throughout the book are the voices of neurodiverse learners telling their own stories of math learning. Through stories of real teachers recognizing the barriers in their own math classrooms and redesigning to increase access, the book reframes students with disabilities from a deficit to an asset perspective, paving the way for trusting their mathematical thinking. Offers equitable math instruction for all learners, including those with disabilities, neurodiverse students, and/or multilingual learners. Applies UDL to the math classroom, providing practical tips and techniques to support students' cognitive, affective, and strategic development. Immerses readers in math classrooms where all students are engaged in meaningful mathematics, from special education day classes to inclusive general education classrooms, from grades K-8. Integrates research on mathematical learning, including critical math content such as developing number sense and place value fluency with math facts and operations and understanding fractions and algebraic thinking. Explores critical issues such as writing IEP goals in math. This book is designed for all math educators, both those trained as general education teachers and those trained as special education teachers. The UDL Math approach is adapted to work for all learners because everyone varies in how they perceive the world and in how they approach mathematical problem solving. When we rethink mathematics to include multiple ways of being a math learner, we make math accessible and engaging for a wider group of learners.

Analysis of Arithmetic for Mathematics Teaching Gaea Leinhardt, Ralph Putnam, Rosemary A. Hattrup, 2020-11-25

This volume emerges from a partnership between the American Federation of Teachers and the Learning Research and Development Center at the University of Pittsburgh. The partnership brought together researchers and expert teachers for intensive dialogue sessions focusing on what each community knows about effective mathematical learning and instruction. The chapters deal with the research on and conceptual analysis of specific arithmetic topics: addition, subtraction, multiplication, division, decimals, and fractions, or with overarching themes that pervade the early curriculum and constitute the links with the more advanced topics of mathematics: intuition, number sense, and estimation. Serving as a link between the communities of cognitive researchers and mathematics educators, the book capitalizes on the recent research successes of cognitive science and reviews the literature of the math education community as well. **New National Framework**
