Gnu Astronomy Utilities Mohammad Akhlaghi, 2015-11-11 The GNU Astronomy Utilities Gnuastro is an official GNU package consisting of separate programs for the manipulation and analysis of astronomical data All the various utilities share the same basic command line user interface for the comfort of both the users and developers GNU Astronomy Utilities is written to comply fully with the GNU coding standards so it integrates finely with the GNU Linux operating system This also enables astronomers to expect a fully familiar experience in the source code building installing and command line user interaction that they have seen in all the other GNU software that they use *Data Analysis in Astronomy* V. di Gesù, L. Scarsi, P. Crane, J.H. Friedman, S. Levialdi, 2012-12-06 The international Workshop on Data Analysis in Astronomy was intended to give a presentation of experiences that have been acquired in data analysis and image processing developments and applications that are steadily growing up in Astronomy The quality and the quantity of ground and satellite observations require more sophisticated data analysis methods and better computational tools The Workshop has reviewed the present state of the art explored new methods and discussed a wide range of applications The topics which have been selected have covered the main fields of interest for data analysis in Astronomy The Workshop has been focused on the methods used and their significant applications Results which gave a major contribution to the physical interpretation of the data have been stressed in the presentations Attention has been devoted to the description of operational system for data analysis in astronomy The success of the meeting has been the results of the coordinated effort of several people from the organizers to those who presented a contribution and or took part in the discussion We wish to thank the members of the Workshop scientific committee Prof M Cappacioli Prof G De Biase Prof G Sedmak Prof A Zichichi and of the local organizing committee Dr R Buccheri and Dr M C Maccone together with Miss P Savalli and Dr A Gabriele of the E Majorana Center for their support and the unvaluable part in arranging the Workshop *Astronomical Data Analysis Software and Systems II* R. Barnes, 1993 Information & On-Line Data in Astronomy D Egret, M.A Albrecht, 2012-12-06 The ability of storing managing and giving access to the huge quantity of data collected by astronomical observatories is one of the major challenges of modern astronomy At the same time the growing complexity of data systems implies a change of concepts the scientist has to manipulate data as well as information Recent developments of the WorldWideWeb bring interesting answers to these problems The book presents a wide selection of databases archives data centers and information systems Clear and up to date descriptions are included together with their scientific context and motivations Audience This volume provides an essential tool for astronomers librarians data specialists and computer engineers Statistics, Data Mining, and Machine Learning in Astronomy Željko Ivezić, Andrew J. Connolly, Jacob T. VanderPlas, Alexander Gray, 2014-01-12 As telescopes detectors and computers grow ever more powerful the volume of data at the disposal of astronomers and astrophysicists will enter the petabyte domain providing accurate measurements for

billions of celestial objects This book provides a comprehensive and accessible introduction to the cutting edge statistical methods needed to efficiently analyze complex data sets from astronomical surveys such as the Panoramic Survey Telescope and Rapid Response System the Dark Energy Survey and the upcoming Large Synoptic Survey Telescope It serves as a practical handbook for graduate students and advanced undergraduates in physics and astronomy and as an indispensable reference for researchers Statistics Data Mining and Machine Learning in Astronomy presents a wealth of practical analysis problems evaluates techniques for solving them and explains how to use various approaches for different types and sizes of data sets For all applications described in the book Python code and example data sets are provided The supporting data sets have been carefully selected from contemporary astronomical surveys for example the Sloan Digital Sky Survey and are easy to download and use The accompanying Python code is publicly available well documented and follows uniform coding standards Together the data sets and code enable readers to reproduce all the figures and examples evaluate the methods and adapt them to their own fields of interest Describes the most useful statistical and data mining methods for extracting knowledge from huge and complex astronomical data sets Features real world data sets from contemporary astronomical surveys Uses a freely available Python codebase throughout Ideal for students and working astronomers
