acoustic analyses of ditropic pairs and subsequent statistical tests revealed that there is almost no difference in the duration pitch or intensity in literal and figurative interpretations However the analysis of relative clauses and quotations demonstrated that speakers are more likely to use acoustic cues to differentiate between the two possible readings The book argues that the acoustic analysis of polysemous phrases could be successfully implemented in designing automatic speech recognition systems in order to improve their performance in disambiguating polysemous phrases Analyzes acoustic features of polysemous strings and an implementation of a speech disambiguation program Includes evidence that superficially identical strings exhibit different acoustic features Argues that acoustic analysis of polysemous phrases can be successfully implemented in automatic speech recognition
