

A scenic landscape featuring a calm lake in the foreground, surrounded by dense evergreen forests. In the background, majestic mountains rise under a sky filled with dramatic, dark clouds tinged with orange and yellow light, suggesting a sunset or sunrise. The overall mood is serene yet powerful.

Those with limited views are
fearful and irresolute: the faster
they hurry, the slower they go.

Cowley,2022-09-30 Cognition is usually associated with brain activity Undoubtedly some brain activity is necessary for it to function However the last thirty years have revolutionized the way we intend and think about cognition These developments allow us to think of cognition as distributed in the sense that it needs tools artifacts objects and other external entities to allow the brain to operate properly Organizational Cognition The Theory of Social Organizing takes this perspective and applies it to the organization by introducing a model that defines the elements that allow cognition to work This model shows that cognition needs the combined and simultaneous presence of micro aspects i.e the biological individual and macro super structural elements e.g organizational climate culture norms values rules These two become practice of cognition as they materialize in a meso domain this is any action that allows individuals to perform their daily duties Due to the micro meso macro interactions this has been called the 3M Model Most of what happens in the meso domain relates to exchanges between two or more people i.e it is a social activity This is usually mentioned in the perspectives above but it is rarely explored By bringing meso activities to the center of cognition the book develops and presents the Theory of Social Organizing Not only this is useful to organizational scholars but it also opens a new path for cognition research *Re-Engineering Philosophy for Limited Beings* William C.
