### BAD PASSWORDS MAKE BAD PASSPHRASES

We are seeing a trend of Internet users trying to use simplistic passphrases on Internet sites. They are failing for the simple fact that many are using words that have been long considered as bad passwords. Password cracking algorithms include these bad passwords as a part of their recipe.

### COMMON MISTAKES WHILE SETTING PASSWORDS

#### FU\*K

#### WATCH THE LANGUAGE

Passphrases that contain foul language are like a double whammy. Because not only are they weak, they also can be embarrassing to the owner of the password when they are disclosed. You don't want to be that person that is cursing about your boss as a part of your passphrase. These types of passphrases can have you using LinkedIn to look for another job! Curse words are also near the top of any brute force dictionary.

#### BAD RELATIONSHIP

Many users created passwords related to the site, which is a bad move. In the case of the LinkedIn data, "link", "work", "job", "connect", and "career" were all in the top 20 patterns used according to our analysis. Also, if you use a generic character related word for a password or passphrase when the average password is eight characters you are setting yourself up for disaster.

#### LOSING RELIGION

When it comes to passphrases, losing religion is a good thing. For example "god", "angel" and "jesus" appeared in the pattern of the top 15 words used in the passwords analyzed. We have seen in the past that religious affiliated sites fall into this trap when it comes to password selection. It will also remain an issue in the passphrase era.

#### COUNT DRACULA

Numbers trailing passphrases will be an issue just as with passwords. Many Internet users seem to share the numbers obsession of the Count from Sesame Street, with "1234", "12345", "123456", "654321", and "1234567" all appearing in the top 30 patterns.

\*\*\*  
too short!

#### SIZE MATTERS

Passphrases should contain at least four words that are somewhat random but easy to remember. Most attempts at passphrases look more like traditional passwords, for instance "ilove" is a passphrase starter. If the passphrase is "ilovejen" an attacker essentially is cracking a three letter password.

#### WHEN LOVE IS BAD

"I love the boss" is totally stupid when dealing with family and loved ones. However, this phrase or any thing related to it would be on a short list of banned passphrases in my opinion. Passphrases containing "love" and "iloveyou" make my list.
