is no longer needed It automatically calls the Dispose method of an object when it goes out of scope which is particularly useful for objects that implement the IDisposable interface such as file streams database connections and network streams What is the difference between an interface and an abstract class in C An interface defines a contract that classes can implement specifying only the method signatures without any implementation An abstract class on the other hand can contain both method declarations and implementations but it cannot be instantiated directly Classes can inherit from only one abstract class but they can implement multiple interfaces What is the purpose of the async and await keywords in C The async and await keywords are used for asynchronous programming in C async is used to define asynchronous methods and await is used to asynchronously wait for the result of an asynchronous operation without blocking the calling thread This allows for more responsive and scalable applications particularly in I O bound scenarios These are just a few examples but there s a wide range of topics that might come up in a C interview
