

Instructions for Operating **NO. 2332 GG-1 LOCOMOTIVE**

Lionel No. 2332 GG-1 Locomotive is a replica of the GG-1 locomotive, used by the Pennsylvania Railroad for passenger service.

Lionel model of this locomotive is designed for "0" track but its appearance will be improved even more by the use of the wide "072" curves.

No. 2332 GG-1 locomotive is powered by two Pullmor motors which enable it to pull a long line of passenger cars along a straight section of the track. On regular "0" curves the number of cars should be limited to about half that number to avoid derailment. The operating voltage of this locomotive is from 8 to 18 volts depending on the train load.

LIONEL "MAGNE-TRACTION"

This locomotive is equipped with "Magne-Traction" which means that its driving wheels are magnetized by powerful Alnico magnets inserted in the driving axles in order to grip the track and enable the locomotive to pull heavier loads and climb steeper grades without slipping on the track. Be careful not to let pins, paperclips, carpet tacks or other small iron objects come in contact with the locomotive or they will be attracted to the wheels, gears, or axles and interfere with the action of the locomotive. NOTE: "Magne-Traction" is not effective on aluminum, brass or other non-magnetic rails. The locomotive also includes four traction tires, which will improve traction on both magnetic and non-magnetic rails.
