Page,Cathy Gilbert,Susan Dolan,1998 *Drilled Shaft Design and Construction Guidelines Manual* Lymon C. Reese,Stephen J. Wright,1977 The Archaeologist's Manual for Conservation Bradley A. Rodgers,2007-05-08 This is a Foreword by an

archaeologist not a conservator but as Brad Rodgers says Conservation has been steadily pulled from archaeology by the forces of specialization p 3 andhewantstoremedythatsituationthroughthismanual He seesthisworkasa calltoactionforthenon professionalconservator permitting curators conservators and archaeologists to identify artifacts that need prof sional attention and allow these professionals to stabilize most artifacts in their own laboratories with minimal intervention using simple non toxic procedures p 5 It is the mission of Brad s manual to bring conservation back into arch ology p 6 The degree of success of that goal depends on the degree to which archaeologists pay attention to and put to use what Brad has to say because as he says The conservationist archaeologist is responsible to make preparation for an artifact s care even before it

is excavated and after its storage into the foreseeable future a tremendous responsibility p 10 The manual is a combination of highly technical as well as common sense methods of conserving wood iron and other metals ceramics glass and stone organics and composites a far better guide to artifact conservation than was available to me when I first faced that archaeological challenge at colonial Brunswick Town North Carolina in 1958 a challenge still being faced by archaeologists today The stage of conservation in 1958 is in dramatic contrast to the procedures Brad describes in this manual conservation has indeed made great progress For instance a common procedure then was to heat the artifacts red hot in a furnace a method that made me cringe

Volcanic Plumes

Pasquale Sellitto, Giuseppe Salerno, Andrew McGonigle, 2019-03-21 Volcanoes release plumes of gas and ash to the atmosphere during episodes of passive and explosive behavior These ejecta have important implications for the chemistry and composition of the troposphere and stratosphere with the capacity to alter Earth's radiation budget and climate system over a range of temporal and spatial scales Volcanogenic sulphur dioxide reacts to form sulphate aerosols which increase global albedo e.g. by reducing surface temperatures in addition to perturbing the formation processes and optical properties of clouds Released halogen species can also deplete stratospheric and tropospheric ozone Volcanic degassing furthermore played a key role in the formation of Earth's atmosphere and volcanic plumes can affect air quality pose hazards to aviation and human health as well as damage ecosystems The chemical compositions and emission rates of volcanic plumes are also monitored via a range of direct sampling and remote sensing instrumentation in order to gain insights into subterranean processes in the respect of the magmatic bodies these volatiles exsolve from Given the significant role these gases play in driving volcanic activity e.g. via pressurisation the study of volcanic plumes is proving to be an increasingly fruitful means of improving our understanding of volcanic systems potentially in concert with observations from geophysics and contributions from fluid dynamical modelling of conduit dynamics This Special Issue is aimed at presenting the state of the art of the multidisciplinary science concerning all aspects of volcanic plumes of relevance to the volcanology climatology atmospheric science and remote sensing communities
