Q.No.10. Write about MICR (Magnetic Ink Character Recognition). (M08-1M, M03-5M, RTP)

Introduction: This method is useful for direct data entry. Here a machine recognizes magnetically changed characters that are printed on source documents. These systems are typically found in banks (used for processing cheques). MICR readers detect the characters and convert them into digital data.

Features:

- It employs MI a system of printed characters, which can be read by human beings as well as machines.
- It uses a special printing font MI to represent characters.
- In this font each character is composed of vertical bars.
- Characters are printed using special ink that consists of magnetisable material.

How it reads?

- In this system, the data to be read is passed through a reading head.
- Small and long gaps in the character will send different signals to the computer (represented by bit 1 and 0 bit).

Where it is used?

- This method is primarily used in banking industry and most of the cheques are now processed under MICR approach.
- Data about bank identification number, customer's bank account number are directly printed on the cheque, by a printing press. Cheques are then handed over to the customer.
