Integrating the Human Sciences Rick Szostak,2022-11-15 What if we recognized that the human sciences collectively investigate a few dozen key phenomena that interact with each other Can we imagine a human science that would seek to stitch its understandings of this system of phenomena into a coherent whole If so what would that look like This book argues that we are unlikely to develop one unified theory of everything Our collective understanding must then be a map of the myriad relationships within this large but finite and manageable system coupled with detailed understandings of each causal link and of important subsystems The book outlines such a map and shows that the pursuit of coherence and a more successful human science enterprise requires integration recognizing the strengths and weaknesses of different methods and theory types and the pursuit of terminological and presentational clarity It explores how these inter connected goals can be achieved in research teaching library classification public policy and university administration These suggestions are congruent with and yet enhance other projects for reform of the human sciences This volume is aimed at any scholar or student who seeks to comprehend how what they study fits within a broader understanding

Argumentation Machines C. Reed,T.J. Norman,2013-03-09 In the late 1990s AI witnessed an increasing use of the term argumentation within its bounds in natural language processing in user interface design in logic programming and nonmonotonic reasoning in AI s interface with the legal community and in the newly

emerging field of multi agent systems It seemed to me that many of these uses of argumentation were inspired by of ten inspired guesswork and that a great majority of the AI community were unaware that there was a maturing rich field of research in Argumentation Theory and Critical Thinking and Informal Logic that had been steadily re building a scholarly approach to the area over the previous twenty years or so Argumentation Theory on its side was developing theories and approaches that many in the field felt could have a role more widely in research and soci ety but were for the most part unaware that AI was one of the best candidates for such application *Global Journalism Ethics* Stephen J.A.
