developments in the cellular communication services The second part will be exemplifying the technology behind GSM In this part the paper will first address the technologies used to provide wireless voice and data services to subscribers commonly referred to as multiplexing Followed by examining the structure of the GSM net work itself The last main part will focus on the third generation technology by showcasing the widely used Universal Mobile Telecommunication System UMTS This part will not only introduce the technology by looking at the architecture in detail but also determine some of the differences to the GSM technology and address the overall advantages Finally the paper will be summarized
