ABSTRACT

In this paper we provide a global description, in quantitative terms, of the developments in road safety research from the early 1900s until 2010. To this end, electronic databases have been searched and papers matching search criteria were selected for analysis. Word and co-word frequencies of key-words in all the titles and abstracts of these publications were collected and analysed. In this study, we explored the possibility to identify historical trends in road safety research topics. Furthermore we explored whether the important paradigms concerning the history of road safety research as presented in the literature can be confirmed on quantitative grounds. It is concluded that the first results are promising: varying trends over time could be identified in the selected topics, which are generally in line with the different road safety paradigms. Finally, a number of limitations of the present study are listed, including the incompleteness of the currently used dataset.

1. Introduction

Over time, a number of authors have provided overviews of road safety research. However, these reviews generally focused on either a limited time period, or on specific areas of interest. None of these covered the history of road safety research in a comprehensive and quantitative way.

Early reviews of road safety and traffic research are provided by [Glanville \(1955\)](#) and [Haight \(1964\)](#). Glanville described the increase in numbers of vehicles and an increasing traffic flow, accompanied by a growth of road casualties between 1910 and 1953, and summarized several lines of research in the area of speeds and stopping times at intersections, pedestrian crossings, motorcycle helmets, and slippery roads. [Haight \(1964\)](#) compiled an annotated bibliography of scientific research in road traffic and safety, containing about 250 publications on road safety published between 1915 and 1964 on various topics but with a focus on mathematical modeling and methodologically and statistically oriented papers. Finally, [Morm \(2007\)](#) has looked into road safety issues that had been topics in PIARC (Permanent International Association of Road Congresses) conferences in the period 1908–1938.

The more general history of transport has been the topic of a number of reviews published during the past ten years. These include various transportation modes and automobility ([Armstrong, 1998](#); [Morm, 2003](#)), but none of these overviews included road safety issues or the development of road safety research.

In [OECD \(1997, pp. 90–92\)](#) it is mentioned that “a review of past developments reveals that road safety work has mainly been practical in nature. Indeed, the need for theories, models and research methodologies originated from practice, where

[☆] Editor's Note: This paper was invited and peer-reviewed for a special section on History of Traffic Psychology. The special section included a wide range of manuscript styles, from those typical of this journal to other styles just as important for sharing the discipline's history. Authors contributed reasoned viewpoints from experience and literature on where the discipline has come from and where it may be heading, to an investigation of trends and topics in the discipline since the early 20th century.

E-teaching History Joanna Wojdon, 2016-02-08

Incorporating Information and Communication Technology tools into the teaching and learning of history has become a common practice worldwide. It is no longer a question of if but of how to introduce it in the classroom in order to make history education more effective and enjoyable. This book gathers the experiences and reflections of researchers from three continents based on their own activities and on empirical studies. The contributions concentrate on videogames related to the past, history e-textbooks and applications for mobile devices with historical content. Some texts deal explicitly with global phenomena such as the Assassin's Creed or Colonization games; some present materials developed for the international market such as a European e-textbook or mobile phone applications while others concentrate on local experiences such as a Chinese e-schoolbag, a Swiss tablet application, Polish and Estonian e-textbooks or English teacher training. The book is a result and a reinforcement of the belief that history educators can benefit from the lessons learnt in other places of the globalising world.

Michael Oakeshott and the Cambridge School on the History of Political Thought Martyn P. Thompson, 2019-05-20. This book is a critique of Cambridge School Historical Contextualism as the currently dominant mode of history of political thought drawing upon Michael Oakeshott's analysis of the logic of historical enquiry. While acknowledging that the early Cambridge School work represented a considerable advance towards genuinely historical histories of political thought, this work identifies two major historiographical problems that have become increasingly acute. The first is general: an insufficiently rigorous understanding of the key concept of pastness necessarily presupposed in historical enquiry of all kinds. The second is specific to histories of political thought: a failure to do justice to the varieties of past political thinking, especially differences between ideology and philosophy. In addressing these problems, the author offers a comprehensive account of the history of political thought that establishes the parameters not just of histories of ideological thinking but also of the much disputed character of histories of political philosophy. Since rethinking history of political thought in Oakeshottian terms requires resisting current pressures to turn history into the servant of currently felt needs, the book offers a sustained defence of the cultural value of modernist historical enquiry against its opponents. An important work for political theorists, historians of political thought and those researching intellectual history, the philosophy of history and proposed new directions in contemporary historical studies.

The Donkey in Human History Peter

Mitchell, 2018-02-14 Donkeys carried Christ into Jerusalem while in Greek myth they transported Hephaistos up to Mount Olympus and Dionysos into battle against the Giants They were probably the first animals that people ever rode as well as the first used on a large scale as beasts of burden Associated with kingship and the gods in the ancient Near East they have been and in many places still are a core technology for moving people and goods over both short and long distances as well as a

supplier of muscle power for threshing and grinding grain pressing olives raising water ploughing fields and pulling carts to name just a few of the uses to which they have been put Yet despite this they remain one of the least studied and most widely ignored of all domestic animals consigned to the margins of history like so many of those who still depend upon them Spanning the globe and extending from the donkey's initial domestication up to the present this book seeks to remedy this situation by using archaeological evidence in combination with insights from history and anthropology to resituate the donkey and its hybrid offspring such as the mule in the unfolding of human history looking not just at what donkeys and mules did but also at how people have thought about and understood them Intended in part for university researchers and students working in the broad fields of world history archaeology animal history and anthropology but it should also interest anyone keen to learn more about one of the most widespread and important of the animals that people have domesticated

Doing Justice to History Barrie Sander, 2021-03-09 As communities struggle to make sense of mass atrocities expectations have increasingly been placed on international criminal courts to render authoritative historical accounts of episodes of mass violence Taking these expectations as its point of departure this book seeks to understand international criminal courts through the prism of their historical function The book critically examines how such courts confront the past by constructing historical narratives concerning both the culpability of the accused on trial and the broader mass atrocity contexts in which they are alleged to have participated The book argues that international criminal courts are host to struggles for historical justice discursive contests between different actors vying for judicial acknowledgement of their interpretations of the past By examining these struggles within different institutional settings the book uncovers the legitimating qualities of international criminal judgments In particular it illuminates what tends to be foregrounded and included within as well as marginalised and excluded from the narratives of international criminal courts in practice What emerges from this account is a sense of the significance of thinking about the emancipatory limits and possibilities of international criminal courts in terms of the historical narratives that are constructed and contested within and beyond the courtroom
